BUSINESS REQUIREMENTS DOCUMENT

**Integration of PFMS with the e-Anudaan Portal — Sanction Transmission,
Payment Disbursement and Reconciliation (US-PD Maker–Checker Module)**

Scheme in focus: NAPDDR

Applicable to: AVYAY, SHRESTHA Mode 1, SHRESTHA Mode 2, SMILE

Version 1.0 | 08 September 2026 | Draft for Review

Attribute	Detail
Document Title	BRD — Integration of PFMS with e-Anudaan Portal (Sanction Transmission & Payment Disbursement)
Scheme in Focus	National Action Plan for Drug Demand Reduction (NAPDDR)
Also Applicable To	AVYAY, SHRESTHA Mode 1, SHRESTHA Mode 2, SMILE (scheme-configurable design)
Owning Ministry	Ministry of Social Justice & Empowerment (MoSJE)
Portal	e-Anudaan Grant-in-Aid Portal (Samavesh / grants-msje.gov.in)
External System	Public Financial Management System (PFMS), O/o Controller General of Accounts
Basis of this BRD	PFMS integration meeting held on 27 August 2026; PFMS Claim WebAPI, MasterData WebAPI and Ministry Release & Transfer Entry Data WebAPI integration specifications
Prepared By	e-Anudaan Technical Team / NeGD
Governing Precedence	The PFMS-published API contract and any subsequent PFMS circular govern wherever this document and they differ.

1. Introduction

1.1 Purpose

This Business Requirements Document (BRD) defines the business and functional requirements for integrating the e-Anudaan Grant-in-Aid (GIA) portal with the Public Financial Management System (PFMS), so that a sanction approved on e-Anudaan is transmitted electronically to PFMS for disbursement, tracked through to bank credit, and reconciled — in place of the present manual hand-off between sanction issuance and payment. The document covers the end-to-end workflow from the point an Under Secretary, Programme Division (US-PD) issues a sanction on e-Anudaan, through preparation and authorisation of the payment advice by the Programme Division's PD Maker and PD Checker, transmission to PFMS, and closure of the case on confirmed credit to the beneficiary NGO.

It further specifies, at field level, what the e-Anudaan portal must capture in the US-PD login — both at the PD Maker stage (preparation of the payment advice) and the PD Checker stage (authorisation and digital signature) — so that the data pushed to PFMS through the ReceiveSanctionData API is complete and correct on the first attempt.

1.2 Background

e-Anudaan is the common Grant-in-Aid portal serving five MoSJE schemes — NAPDDR, AVYAY, SHRESTHA Mode 1, SHRESTHA Mode 2 and SMILE. Under the existing process, once a competent authority sanctions a grant, the sanction order and cost sheet are handed off outside the portal for entry into PFMS by DDO-level staff; e-Anudaan has no record of the PFMS sanction, bill, voucher or payment status thereafter, and the NGO is informed of disbursement through manual follow-up rather than a system-confirmed credit.

A dedicated PFMS integration meeting was held on 27 August 2026 to settle the design of a direct electronic hand-off. NAPDDR is the scheme in focus for this first release; the design is intended to extend, by configuration rather than rebuild, to AVYAY, SHRESTHA Mode 1, SHRESTHA Mode 2 and SMILE. The agreed mechanism is a GIFMIS e-Sanction: e-Anudaan composes the sanction in the PFMS-defined JSON format and transmits it through a single API call (ReceiveSanctionData); PFMS then carries the bill through the DDO and Pay & Accounts Office (PAO), executes Direct Benefit Transfer (DBT), and e-Anudaan retrieves the outcome — bill, voucher and payment status, and finally the Unique Transaction Reference (UTR) — by polling PFMS status APIs and by pulling the Ministry Release and Transfer Entry feed for reconciliation.

1.3 Need for Revamp / Transformation

The present arrangement is manual from the point of sanction onward and carries the following limitations, which this integration is intended to remove:

- Sanction and bill data is re-keyed by hand at the DDO end, with attendant risk of transcription error and delay.
- e-Anudaan has no visibility of bill generation, PAO passing, or payment status once the sanction leaves the portal — the Ministry cannot track a grant from sanction to credit in one place.
- The NGO's bank account and PFMS payee (vendor) code are not captured in a PFMS-consumable form at the application stage, so payment cannot be initiated electronically without a separate, manual reconciliation step.
- The head of account is held in e-Anudaan as a single descriptive line, whereas PFMS requires it as four coded, validated parts (Function Head, Object Head, Category, Grant Number).

- There is no Maker–Checker control specifically on the payment advice stage, and no digital-signature-backed authorisation trail prior to transmission.
- Reconciliation of what PFMS has actually released against what e-Anudaan believes has been sanctioned is currently a manual, periodic exercise rather than a continuous system check.

1.4 Vision / Target State

The target state is straight-through processing of the payment leg of the grant lifecycle: the review and approval chain up to the US-PD sanction remains exactly as it is today; from that point, a Programme Division PD Maker prepares a payment advice inside e-Anudaan itself, a PD Checker authorises it with a Digital Signature Certificate (DSC), and the system transmits it to PFMS through one `ReceiveSanctionData` call per bill. e-Anudaan then polls PFMS for status, bill, voucher and payment detail, reconciles against the Ministry Release/Transfer Entry feed, and notifies the NGO only when a confirmed UTR credit is captured — never on an intermediate status change. The Maker and Checker do not reopen or alter the sanction; they only prepare and authorise the payment against a sanction that is already final.

2. Objectives

2.1 Business Objectives

- Eliminate manual re-keying of sanction and bill data at the DDO end for e-Anudaan Grant-in-Aid disbursements.
- Give the Ministry end-to-end visibility of a grant — from US-PD sanction to confirmed bank credit — within e-Anudaan itself.
- Reduce disbursement turnaround time and the effort currently spent on manual reconciliation between the portal and PFMS.
- Strengthen auditability and DBT compliance of Grant-in-Aid payments through a single, traceable electronic sanction per bill.
- Build the integration once, in a scheme-agnostic manner, so it extends to AVYAY, SHRESTHA Mode 1, SHRESTHA Mode 2 and SMILE by configuration.

2.2 Functional Objectives

- Capture the NGO's PFMS payee code and confirmed bank account/IFSC at the application stage, so payment data is PFMS-ready before sanction.
- Introduce a Maker–Checker control on the payment advice, distinct from and subsequent to the sanction itself.
- Transmit each sanctioned bill to PFMS through a single ReceiveSanctionData call, carrying sanction header, coded head of account, beneficiary detail and supporting-document hashes together.
- Track bill generation, PAO passing and payment progress, and capture the UTR against each beneficiary payment.
- Reconcile e-Anudaan's own sanction and payment records against the PFMS Ministry Release and Transfer Entry feed.
- Notify the NGO of disbursement only on confirmed credit, never on an intermediate status change.

2.3 Technical Objectives

- Build a PFMS client module within e-Anudaan covering the authentication handshake, ReceiveSanctionData transmission, and the status-polling APIs.
- Synchronise and locally cache PFMS master data — Controller, PAO, DDO, PD Code, Grant Number, Function Head, Object Head and Category — scheme-wise.
- Restructure the "head of account" from a single free-text descriptive line into four coded, independently validated fields.
- Generate a SHA-256 hash of every supporting document and serve PFMS a single-use, time-boxed view link rather than the document itself.
- Maintain a locally-held pool of PFMS-issued Claim Reference Numbers, drawn in batches ahead of need and consumed one per beneficiary payment.

2.4 UI/UX Objectives

- Present the PD Maker with a single, sequential workspace — sanction header, head of account, beneficiary/payment detail, supporting documents, submit — that mirrors the order in which PFMS actually needs the data.
- Pre-fill every field e-Anudaan already knows (from the sanction order, cost sheet and NGO application) so the Maker supplies only what PFMS additionally requires.
- Give the PD Checker a read-only mirror of the exact payload that will be transmitted, placed alongside the original sanction order, before DSC authorisation.
- Translate PFMS error codes and bill-return reasons into plain-language messages shown against the case, rather than exposing raw codes to the user.

2.5 Reporting & Analytics Objectives

- A sanction-pipeline dashboard showing counts by PFMS status (Created, Submitted, Approved, Bill Generated, ..., Closed, Cancelled).
- An ageing report of sanctions pending at each PFMS stage, DDO-wise.
- A disbursement reconciliation report comparing sanctioned amount, credited amount and UTR, scheme-wise and DDO-wise.
- A failure/exception report trending PFMS validation-error categories over time.
- A Claim Reference Number pool utilisation report (drawn vs. consumed vs. remaining).

3. Scope of Work

3.1 In-Scope

The following are within the scope of this BRD, drawing on the decisions of the 27 August 2026 PFMS meeting:

A. NGO Application Form (e-Anudaan build)

- Capture of the NGO's PFMS code (payee unique code), with a confirmation tick by the NGO.
- Mandatory confirmation of the NGO's bank account number and IFSC on the application form; no sanction shall be issued without both.

B. Ministry / Bureau decisions reflected as portal configuration

- The coded head of account per scheme (13-digit Function Head, 2-digit Object Head, Category, 3-digit Grant Number), replacing the current descriptive line.
- DDO, PAO and PD codes from the PFMS record, with DDO mapping configured scheme-by-scheme.
- Custody of the Digital Signature Certificate and identification of the officer who signs at the Checker step.
- Back-fill of bank account details for older sanctioned files that carry none, ahead of those files entering the PFMS pipeline.

C. PFMS-side enablement (external dependency, referenced not built)

- Agency registration, credentials and IP whitelisting between e-Anudaan and PFMS.
- Confirmation of scheme codes (NAPDDR 3817, AVYAY 3968, SHRESTHA Mode-2 3964, DDRS 971, ADIP 1805) and allotment of codes for SHRESTHA Mode-1 and SMILE.
- Confirmation of landing status at the DDO level and whether the sanction is to be sent as an eSanction.
- Provision of a UAT environment and a nominated PFMS technical officer for testing.

D. e-Anudaan engineering (this BRD's primary build)

- PFMS client: authentication handshake, ReceiveSanctionData transmission, and status pollers.
- PFMS master-data tables and synchronisation (DDO, PAO, PD, Function/Object Head, Grant, Category).
- Restructuring of the head of account from a descriptive line to coded parts.
- Claim Reference Number pool; supporting-document hashing and the single-use view link.
- The US-PD login: PD Maker payment-advice screen and PD Checker authorisation/DSC screen; UTR capture; NGO notification only on confirmed credit.

3.2 Out-of-Scope

- Any PFMS claim/bill type other than RPR-34 Grants-in-Aid Bill (RPR Type 7) — the many other RPR categories documented in the PFMS Claim WebAPI specification (pay bills, TA/LTC, GPF/CPF, medical reimbursement, pension, etc.) are not part of this integration.

- Cheque payment mode (PaymentMode = 9); only e-payment (PaymentMode = 528) is in scope, per the 27 August 2026 decision.
- Any account-validation-before-sanction API — explicitly not sought from PFMS as an interface; the NGO's self-entered and confirmed bank account is relied upon instead.
- PFMS-side configuration, agency registration, and UAT provisioning — these are PFMS obligations tracked under Section 9 (Risks & Dependencies), not e-Anudaan deliverables.
- Changes to the review and approval chain prior to the US-PD sanction — that chain is unchanged by this integration.
- SHRESTHA payment-mode design (TSA vs. hybrid) and the Monthly Expenditure Plan certificate mechanism, pending a separate Ministry decision (see Section 9).

4. Stakeholders

The table below sets out the roles involved in the integrated sanction-to-disbursement process and their principal responsibility.

Role	Organisation / System	Responsibility in this Process
Secretary / Joint Secretary, MoSJE	Ministry	Overall ownership; sign-off on this BRD
Under Secretary, Programme Division (US-PD)	Ministry — e-Anudaan	Issues the sanction; designates the PD Maker and PD Checker within the Division
PD Maker	e-Anudaan (US-PD login)	Prepares the payment advice against a sanctioned file: head of account, DDO/PD code, beneficiary detail, supporting documents
PD Checker	e-Anudaan (US-PD login)	Reviews and authorises the payment advice; applies the Digital Signature Certificate; may return the case to the Maker
DDO (Drawing & Disbursing Officer)	PFMS	Receives the sanction; draws the Grant-in-Aid bill (Rule 2.57, RPR)
PAO (Pay & Accounts Office)	PFMS	Passes the bill; initiates Direct Benefit Transfer
NGO / Grantee	External applicant	Enters and confirms bank account, IFSC and PFMS payee code; receives the disbursed grant
PFMS Technical Team	O/o Controller General of Accounts	Agency registration, credentials, IP whitelisting, master data, UAT environment
e-Anudaan Engineering Team	NeGD	Builds the PFMS client, master-data sync, head-of-account restructuring, and the US-PD Maker/Checker screens
Bureau / Scheme Division	Ministry	Decides and furnishes the coded head of account, DDO/PD mapping, and DSC custody arrangements

5. Functional Requirements

Design standard: requirements are grouped module-wise, each carries a unique FR-ID, is written in "the system shall..." form, and is traceable to the workflows in Section 8 and the business rules in Section 7 (see the mapping table at 8.6).

5.1 Module: NGO Application Form Enhancements (FR-NGO)

FR-NGO-001: PFMS Payee Code Capture

The system shall provide a field on the NGO application form to capture the NGO's PFMS unique (payee) code, together with a mandatory confirmation tick by the NGO that the code is correct.

FR-NGO-002: Bank Account & IFSC Confirmation

The system shall require the NGO to enter and confirm its bank account number and IFSC code on the application form, and shall not permit a sanction to be issued against an application where this is incomplete.

FR-NGO-003: Back-fill for Legacy Files

The system shall allow the Bureau to capture the PFMS payee code and confirmed bank details against pre-existing sanctioned files that carry none, so that such files can subsequently enter the PD Maker queue.

5.2 Module: PFMS Master Data Management (FR-MDM)

FR-MDM-001: Controller / PAO / DDO Master Sync

The system shall synchronise Controller, PAO and DDO master data from PFMS (GetController, GetPAO, GetDDO) and store it for selection at the payment-advice stage.

FR-MDM-002: Grant / Function Head / Object Head / Category Sync

The system shall synchronise Grant Number, Function Head, Object Head and Category master data from PFMS (GetGrantNumber, GetFunctionHead, GetObjectHead, GetCategory) and present them as a coded, validated selection at the payment-advice stage.

FR-MDM-003: PD Code Master

The system shall synchronise the PD Code for each configured DDO (GetPDCode) and maintain its mapping against the relevant scheme.

FR-MDM-004: DDO eBill Activation Check

The system shall verify DDO eBill activation status (GetDDOeBillActivationStatus) before permitting an eSanction to be prepared against that DDO, and shall flag an inactive or invalid DDO code to the Maker before submission.

FR-MDM-005: Master Refresh

The system shall refresh PFMS master data on a scheduled periodic basis and shall additionally allow an authorised administrator to trigger an on-demand refresh.

5.3 Module: Head-of-Account Restructuring (FR-HOA)

FR-HOA-001: Coded Head-of-Account Capture

The system shall capture the head of account for every scheme as four discrete, validated components — Function Head (13-digit), Object Head (2-digit), Category, and Grant Number (3-digit) — replacing the existing single descriptive text line.

FR-HOA-002: Scheme-wise Head-of-Account Mapping

The system shall allow the Bureau to configure and maintain the coded head of account for each scheme (NAPDDR, AVYAY, SHRESTHA Mode 1, SHRESTHA Mode 2, SMILE), including schemes for which the numeric PFMS scheme code is not yet allotted.

FR-HOA-003: Retrofit to Existing Cost Sheets

The system shall allow the coded head of account to be retrofitted against sanctions already issued but not yet transmitted to PFMS.

5.4 Module: US-PD Login — PD Maker Workspace (FR-PDM)

This is the primary screen through which the Programme Division prepares the payment advice for a sanctioned file. Its detailed field list, organised in the order the Maker completes it, is given in Annexure F.

FR-PDM-001: Maker Queue

The system shall present the PD Maker with a queue of US-PD-sanctioned files pending payment advice, sorted by sanction date, and shall indicate which are fresh cases versus PFMS-returned cases awaiting correction.

FR-PDM-002: Pre-filled Sanction Header

On opening a case, the system shall pre-fill Sanction Number, Sanction Date, Sanction Amount, Financial Year, IFD Concurrence Number and Date, and NGO/beneficiary bank details from the sanction order and cost sheet already held in e-Anudaan, without requiring re-entry.

FR-PDM-003: DDO and PD Code Selection

The system shall require the Maker to select the DDO Code and PD Code applicable to the sanction from the synchronised master (FR-MDM-001, FR-MDM-003).

FR-PDM-004: Coded Head-of-Account Selection

The system shall require the Maker to select Function Head, Object Head, Category and Grant Number for the sanctioned amount, and for each deduction head where applicable, from the coded master (FR-HOA-001), and shall validate that the sum of head-wise amounts equals the sanction amount.

FR-PDM-005: Bill Number Generation

The system shall auto-generate a Bill Number unique per DDO per financial year, and shall capture the Bill Date as the date of preparation.

FR-PDM-006: Fixed-Value Fields

The system shall set Payment Mode to "528 – e-payment", Sanction Type to "14 – Expenditure", Bill Status to "F – Fresh" (or "R" only where the case is a resubmission of a PFMS-returned bill), and RPR Type to "7 – RPR-34 Grants-in-Aid Bill" by default, without requiring Maker entry.

FR-PDM-007: Beneficiary / NGO Payment Details

The system shall capture, per beneficiary, the PFMS Unique (Payee) Code, Name, Account Number, IFSC Code, Gross Amount, Net Amount and Payee Remarks, pre-filled from the NGO application (FR-NGO-001, FR-NGO-002) and editable only where PFMS permits.

FR-PDM-008: Claim Reference Number Assignment

Where the sanction is to be transmitted as an eSanction, the system shall draw a Claim Reference Number from the pre-issued PFMS pool (FR-DOC-003) and assign exactly one number per beneficiary payment.

FR-PDM-009: Supporting Document Upload & Hashing

The system shall allow the Maker to attach the Claim, Sanction, Bill and (where applicable) PAO Pass Order documents, compute a SHA-256 hash of each, and generate a single-use, time-boxed view link for PFMS-side users, per the landing-status-based mandatory tiers set out in BR-DOC-001.

FR-PDM-010: Save as Draft

The system shall allow the Maker to save a partially completed payment advice and resume it later, without submitting it to the Checker.

FR-PDM-011: Submit for Authorisation

The system shall allow the Maker to submit a completed payment advice to the PD Checker queue, and shall lock the advice from further Maker edits once submitted, until the Checker returns it.

FR-PDM-012: UniqueIdentifier Generation

The system shall generate and persist a unique, non-reusable UniqueIdentifier for every payment-advice request message, and shall generate a fresh UniqueIdentifier — cross-referenced to the original via PreviousUniqueIdentifier — for any resubmission.

5.5 Module: US-PD Login — PD Checker Workspace (FR-PDC)

FR-PDC-001: Checker Queue

The system shall present the PD Checker with a queue of payment advices submitted by the Maker, pending authorisation.

FR-PDC-002: Read-only Review

The system shall present the payment advice to the Checker in a read-only view that mirrors exactly the data to be transmitted to PFMS, displayed alongside the original sanction order for comparison.

FR-PDC-003: Return to Maker

The system shall allow the Checker to return a payment advice to the Maker with a mandatory remark; such a return shall reopen only the payment-advice stage and shall not alter or reopen the underlying sanction.

FR-PDC-004: Digital Signature

The system shall require the Checker to apply a valid Digital Signature Certificate before a payment advice can be transmitted to PFMS, and shall record the signing officer's identity and timestamp against the case.

FR-PDC-005: Transmit to PFMS

On successful DSC application, the system shall call the PFMS ReceiveSanctionData API exactly once for the case, and shall prevent a second, concurrent submission of the same UniqueIdentifier.

FR-PDC-006: Sanction Immutability

The system shall not permit the Maker or the Checker to alter the sanction number, sanction amount, or sanctioning authority at the payment-advice stage; only the fields PFMS requires for transmission are editable.

5.6 Module: PFMS Authentication & Transmission (FR-SNC)

FR-SNC-001: Token Handshake

The system shall obtain a one-time Auth Code (GetAuthCode), exchange it for a 15-minute Access Token and 30-minute Refresh Token (LogIn), and transparently renew the token (RefreshToken) before or upon expiry, without interrupting a Maker/Checker session.

FR-SNC-002: IP Whitelisting Compliance

The system shall originate all PFMS API calls from the IP address whitelisted with PFMS, and shall accept PFMS responses only from the PFMS IP address whitelisted at the e-Anudaan end.

FR-SNC-003: Single Call per Bill

The system shall transmit a sanction to PFMS through exactly one ReceiveSanctionData call per bill, carrying the sanction header, expenditure summary, beneficiary details and supporting-document hashes together in a single request.

FR-SNC-004: Resubmission Handling

Where a prior request has failed validation or the sanction has been cancelled at PFMS, the system shall permit resubmission only under a new UniqueIdentifier, cross-referenced to the original via PreviousUniqueIdentifier.

5.7 Module: Status Tracking & Reconciliation (FR-STS)

FR-STS-001: Sanction Status Polling

The system shall poll GetRequestStatus at configured intervals for every transmitted sanction until it reaches a terminal state (Closed or Cancelled), and shall display the current PFMS status against the case using the status reference at Annexure C.

FR-STS-002: Bill and Voucher Status

The system shall retrieve bill and voucher detail once available (GetSanctionBillDetails, GetSanctionVoucherDetails) and display Bill Number, Bill Date, Token Number and Token Date against the case.

FR-STS-003: Payee e-Payment / UTR Capture

The system shall retrieve payee-wise payment status (GetPayeeEPaymentDetails) and capture the Bank Transaction ID (UTR), Scroll Status and Scroll Date per beneficiary.

FR-STS-004: Release & Transfer-Entry Reconciliation

The system shall periodically retrieve the Ministry Release (RD) and Transfer Entry (TD) feed (GetPFMSMinistryReleaseAndTEData) and reconcile it against e-Anudaan's own sanction and payment records, flagging mismatches.

FR-STS-005: Return-Order Viewer

Where a bill or claim is returned and marked "Cancelled" at PFMS, the system shall surface the PFMS-hosted return-order/return-memo document against the case via the configured link.

FR-STS-006: Failure Surfacing

The system shall display PFMS-returned ErrorCode and ErrorMessage values against the case in plain language, mapped through a maintained lookup, rather than showing raw codes to the user.

5.8 Module: NGO Notification (FR-NTF)

FR-NTF-001: Notify Only on Confirmed Credit

The system shall notify the NGO of fund disbursement only upon capturing a successful Bank Transaction ID (UTR) against the sanction, and shall not notify on an intermediate PFMS status change.

FR-NTF-002: Notification Content

The notification to the NGO shall include the sanction number, the amount credited, and the UTR reference.

5.9 Module: Supporting Document & Claim Reference Handling (FR-DOC)

FR-DOC-001: Hash Generation

The system shall compute the SHA-256 hash of each supporting-document PDF from its byte array and encode the hash in Base64 before transmission to PFMS.

FR-DOC-002: Single-Use View Link

The system shall generate a time-boxed, single-use URL, parameterised by UniqueIdentifier, a hash of user credentials, and a tick-format timestamp, for PFMS-side viewing of each supporting document.

FR-DOC-003: Claim Reference Number Pool

The system shall draw Claim Reference Numbers from PFMS in batches ahead of need (GetClaimReferenceNumber), maintain them in a pool keyed by PD Code and Financial Year, and mark each number consumed when assigned to a beneficiary payment (FR-PDM-008).

6. Non-Functional Requirements

6.1 Performance

- The PFMS client shall complete a ReceiveSanctionData round trip (excluding PFMS-side processing time) within a defined response-time budget under normal network conditions, and shall time out and queue the request for retry beyond that budget.
- Status polling (GetRequestStatus and related APIs) shall run as a background/scheduled process and shall not block Maker or Checker screen interactions.

6.2 Availability & Reliability

- The PFMS integration module shall be available whenever the e-Anudaan portal is available; a PFMS-side outage shall degrade only PFMS-dependent functions (the case shown as "Pending"), not the rest of the portal.
- Every PFMS API call and response shall be logged with its UniqueIdentifier, timestamp and outcome, to support audit and troubleshooting.

6.3 Security & Compliance

- All PFMS API traffic shall be over HTTPS; access and refresh tokens shall never be persisted in plain text or exposed in client-side logs.
- IP whitelisting shall be maintained bidirectionally, as agreed with PFMS, and any change communicated promptly to the other party.
- DSC credentials shall remain in the custody of the designated PD Checker officer only; the system shall not store DSC private keys or tokens centrally.
- Supporting documents shall be retained per the Ministry's records-retention policy and shall remain accessible via the single-use link for the configured retention period.

6.4 Scalability & Extensibility

- The coded head-of-account and master-data model shall be scheme-agnostic, so that AVYAY, SHRESTHA Mode 1, SHRESTHA Mode 2 and SMILE can be onboarded to the same PFMS client by configuration (scheme code, DDO/PD mapping) without a code change.
- The design shall accommodate PFMS RPR types beyond RPR-34 in future without restructuring the core PFMS client.

6.5 Usability & Accessibility

- The Maker/Checker workspace shall follow a linear, wizard-style sequence (header → head of account → beneficiary → documents → submit) matching the order in which PFMS requires the data, minimising re-entry.
- Field-level validation shall be shown inline, before submission, wherever the rule is knowable locally (mandatory fields, IFSC format, amount totals), rather than only after a PFMS round trip.

6.6 Interoperability & Integration

- Integration shall conform strictly to the published PFMS Claim WebAPI, MasterData WebAPI and Ministry Release & Transfer Entry Data WebAPI JSON specifications; any deviation shall be raised with PFMS rather than implemented unilaterally.
- The digital-signature workflow shall be interoperable with the DSC tokens already in use by the sanctioning Ministry.

7. Business Rules / Business Logic

Design standard: business rules are numbered (BR-XXX), deterministic, and referenced by the functional requirements and workflow steps that implement them (see Section 8.6).

BR-NGO-001: Mandatory Bank & Payee Code

A sanction shall not be pushed to PFMS unless the beneficiary NGO's bank account, IFSC and PFMS payee code are confirmed on the application.

BR-SNC-001: Single Transmission per Bill

Exactly one ReceiveSanctionData call shall represent one bill; partial or split transmission of a single bill is not permitted.

BR-SNC-002: Sanction Finality

The Maker–Checker stage shall not reopen or alter the sanction already issued by the US-PD; it may only prepare and authorise the payment advice against a sanction that is final.

BR-SNC-003: RPR Type Fixed

For e-Anudaan Grant-in-Aid disbursements, RPR Type shall always be reported to PFMS as "7" (RPR-34 Grants-in-Aid Bill).

BR-SNC-004: Bill Number Uniqueness

Bill Number shall be unique per DDO per financial year.

BR-SNC-005: Claim Reference Mandatory Condition

Claim Reference Number shall be mandatory only where IsESanction = 1; only a number already drawn from the PFMS-issued pool shall be accepted at transmission.

BR-DOC-001: Tiered Supporting-Document Hash Mandate

Supporting-document hash requirements escalate with landing status: Claim and Sanction document hashes are mandatory at "Approved"; the Bill document hash is additionally mandatory at "Bill distribution clerk / Digitally signed by DDO (eBill)"; the PAO Pass Order hash is additionally mandatory at "PassedByPAO".

BR-DSC-001: DSC Custody

Only the officer designated as PD Checker for a given DDO may hold and apply the Digital Signature Certificate for sanctions of that DDO.

BR-NTF-001: Credit-Only Notification

The NGO shall be notified of disbursement only on a successful Bank Transaction ID (UTR); a bare PFMS status change shall not trigger a notification.

BR-CAN-001: No Resurrection of Cancelled Sanctions

A sanction returned to, and marked "Cancelled" at, its landing interface shall not be revived; a new sanction with a new UniqueIdentifier must originate afresh from e-Anudaan.

BR-MDM-001: Master Currency

Payment-advice preparation shall use the most recently synchronised PFMS master data; a DDO, PD or head-of-account combination not present in the synchronised master shall block submission pending a refresh.

BR-BAK-001: Legacy Back-fill Gate

A pre-existing sanctioned file lacking NGO bank details or PFMS payee code shall be routed to back-fill (FR-NGO-003) before it can enter the PD Maker queue.

BR-AUTH-001: No Reuse of Expired Tokens

An expired access token shall never be reused for a PFMS call; a refresh (or, failing that, a fresh login) is mandatory before the next call.

8. Workflows & Process Models

This section is mandatory for all system/portal BRDs. It bridges business intent, system behaviour and development, and is central to this integration: the workflow below is what makes the ReceiveSanctionData payload correct on first submission.

8.1 End-to-End Process Overview

The exchange between e-Anudaan and PFMS is a GIFMIS e-Sanction, not a direct-to-bank transfer by e-Anudaan. The review chain and the US-PD sanction are unchanged; from there, a Programme Division Maker–Checker step is placed on the sanctioned file, and the sanction is handed to PFMS through a single API call. PFMS then draws the bill, passes it at the Pay & Accounts Office, and pays the NGO; e-Anudaan obtains the result by polling PFMS status endpoints and by pulling the release feed for reconciliation. Steps 7–9 below take place inside PFMS; all other steps are within e-Anudaan.

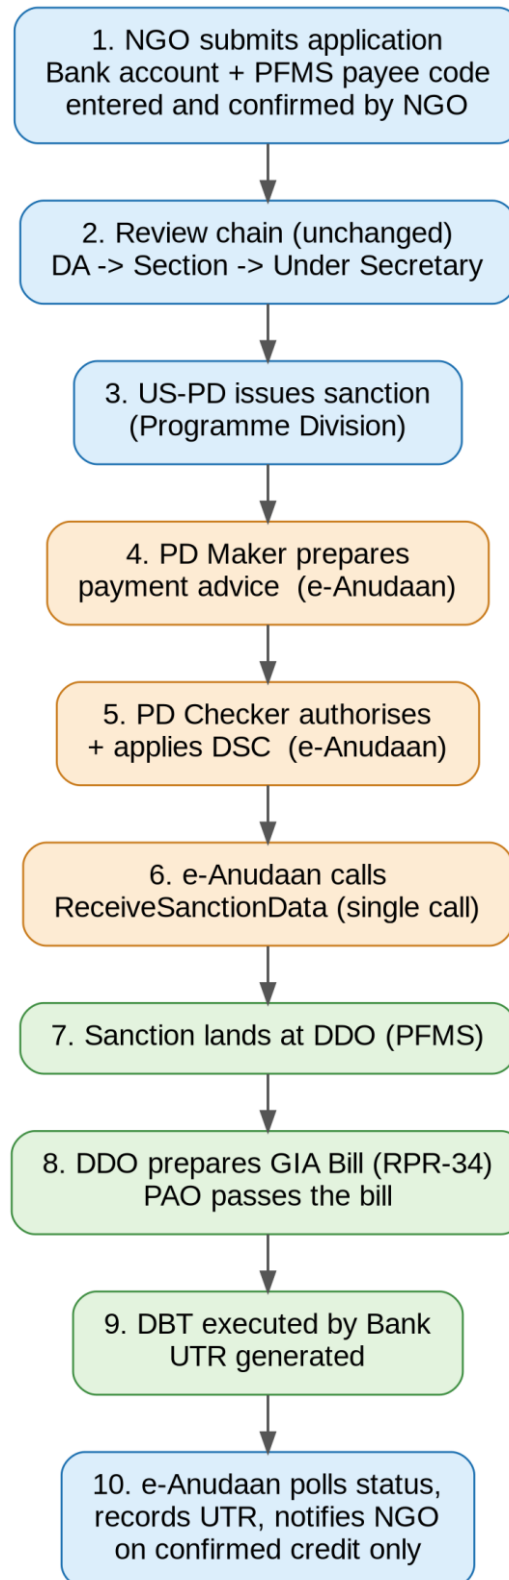

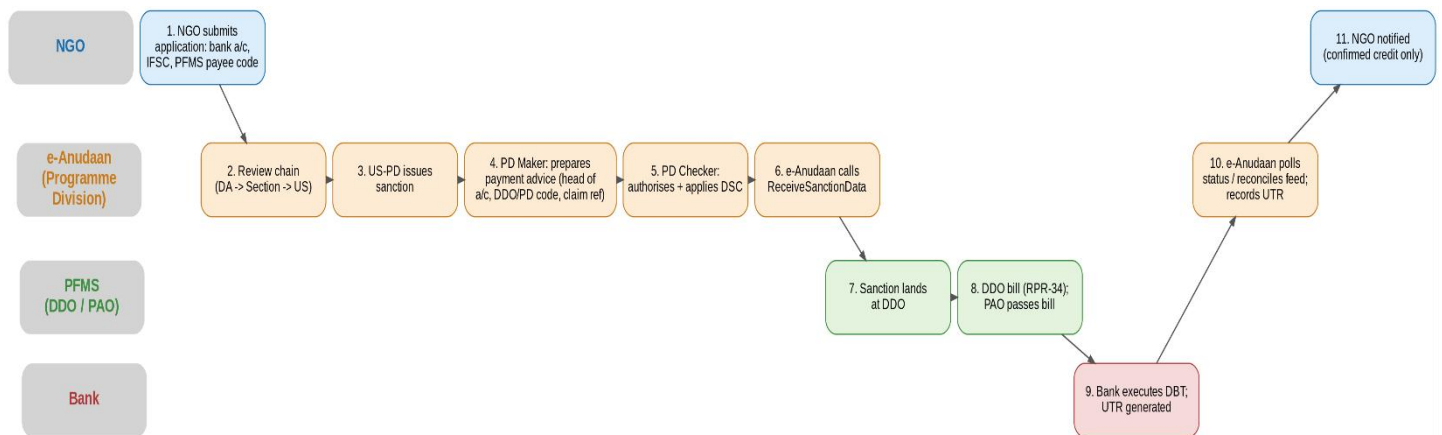

Figure 1: End-to-end process overview — sanction to disbursement.

8.2 Swimlane Diagram

The swimlane below sets out who does what, and in which system, across the four actors involved: the NGO, e-Anudaan's Programme Division (Maker, then Checker), PFMS (DDO/PAO), and the paying bank. The Maker and Checker steps do not reopen the sanctioned case — the sanction is final — they only prepare and authorise the payment against it.

Figure 2: Swimlane — NGO, e-Anudaan Programme Division, PFMS DDO/PAO, Bank.

8.3 User Journey / User Flow — US-PD Login

From the Programme Division user's perspective, the journey below shows the entry point, key actions, decision points and exit states inside the US-PD login — first as PD Maker, then as PD Checker — through to PFMS transmission and case closure on confirmed credit.

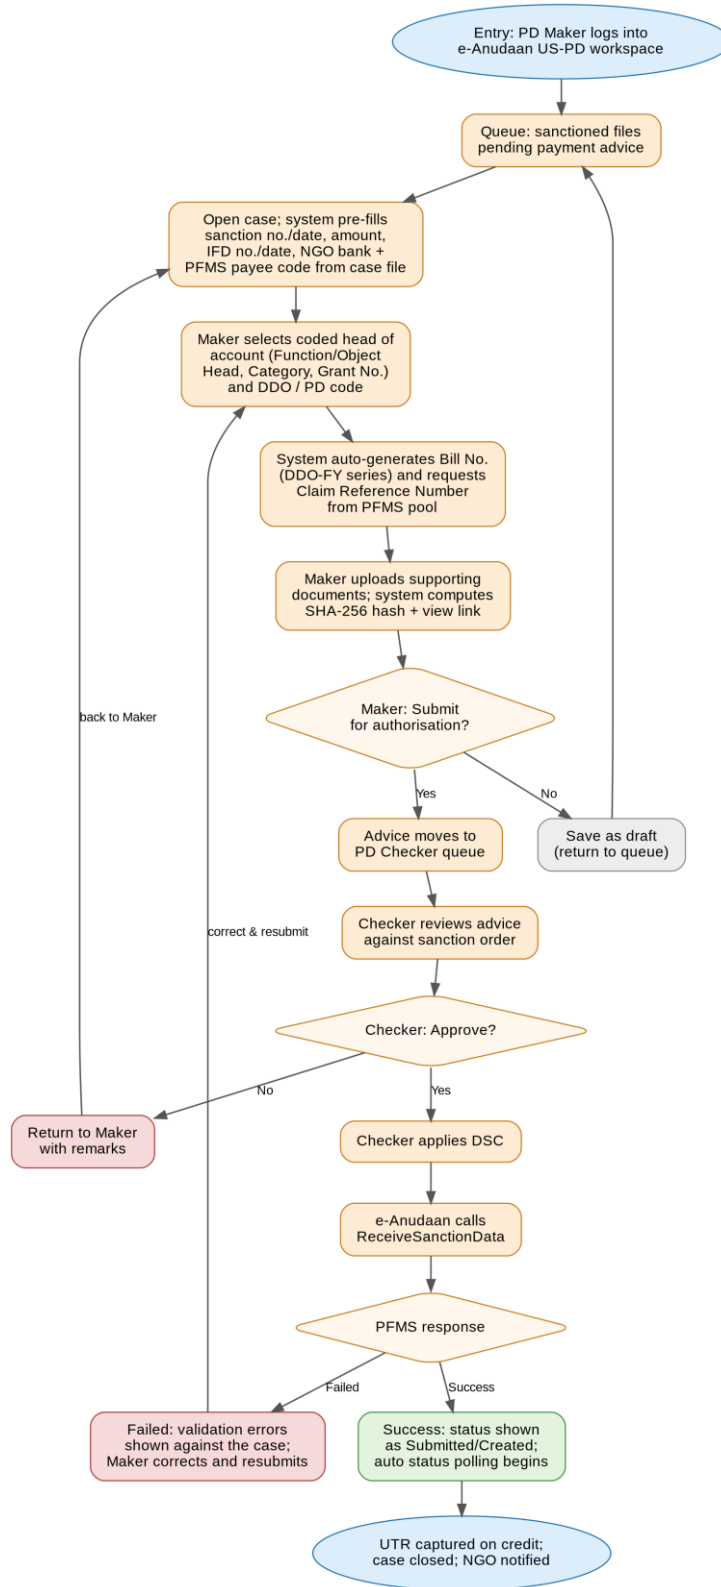

Figure 3: User journey — PD Maker and PD Checker inside the US-PD login.

8.4 Data Flow Diagram (DFD)

The DFD below shows the data stores the integration depends on — the application/sanction case data held in e-Anudaan, the locally cached PFMS master data, the Claim Reference Number pool, and the sanction/payment status & UTR log — and how data moves between the NGO, e-Anudaan and PFMS.

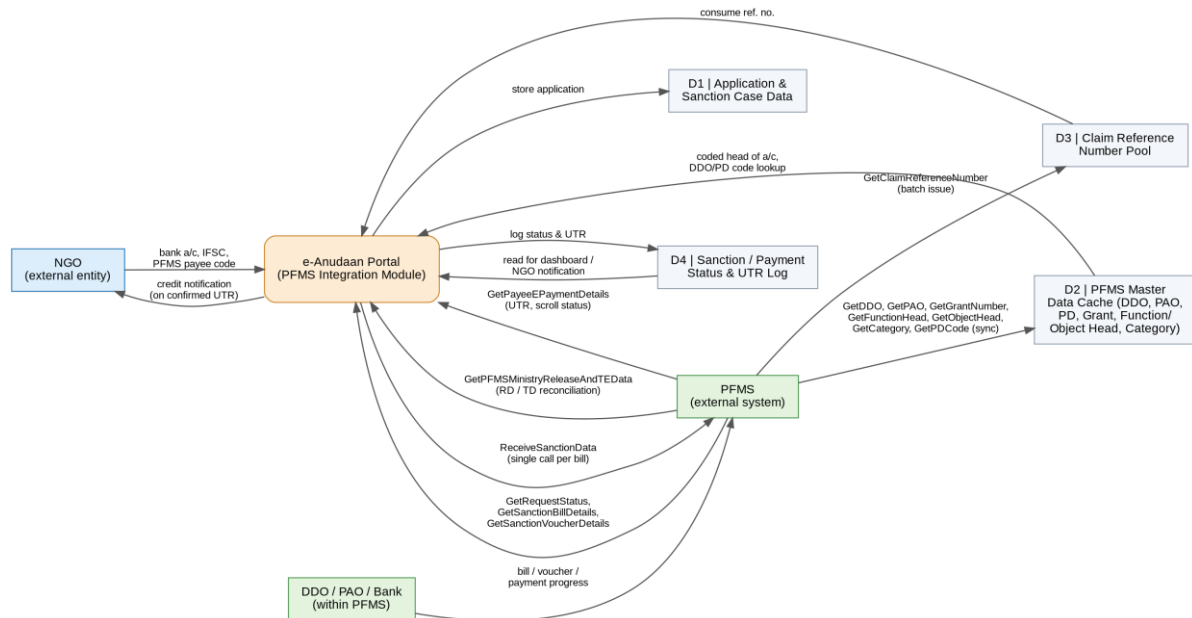

Figure 4: Data flow diagram — e-Anudaan ↔ PFMS.

8.5 Exception & Alternate Flows

Four exception categories govern how the integration behaves when the happy path does not hold: schema/data validation failure at PFMS, a sanction returned and cancelled after landing at a higher hierarchy level, token expiry mid-transaction, and PFMS/network unavailability. Each is handled without ever allowing a cancelled sanction to be silently revived or a token to be reused past expiry.

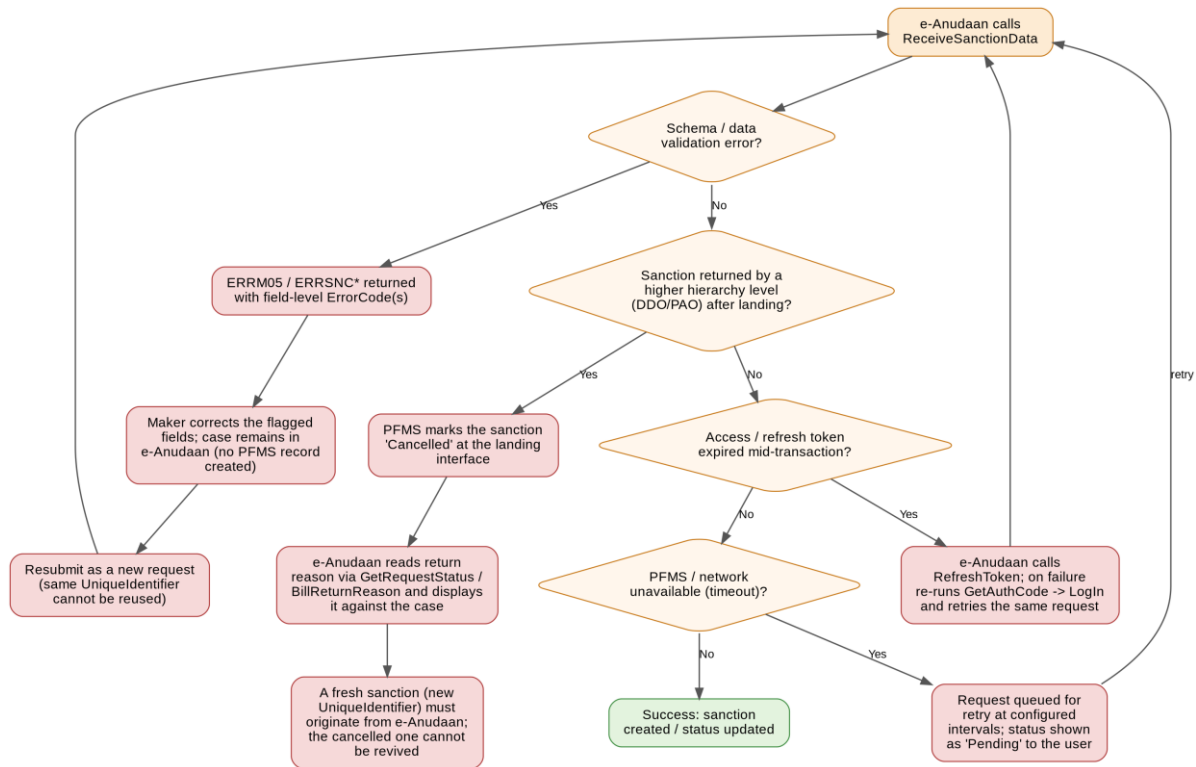

Figure 5: Exception and alternate flows — validation failure, cancellation, token expiry, retry.

Key exception scenarios and handling

Scenario	PFMS Signal	e-Anudaan Handling
Schema or data validation failure	isSuccess = "0", ErrorCode/ErrorMessage (e.g. ERRM05, ERRSNC*)	Case remains un-transmitted; field-level errors shown to the Maker (FR-STS-006); correction and resubmission under the same case (FR-SNC-004)
Bill returned by a higher hierarchy and marked Cancelled	Status = "Cancelled" on GetRequestStatus	Return reason read via BillReturnReason and shown against the case; a fresh sanction with a new UniqueIdentifier must originate from e-Anudaan (BR-CAN-001)
Access/refresh token expired mid-call	HTTP/auth failure on the PFMS call	RefreshToken invoked automatically; on failure, GetAuthCode → Login re-run and the same request retried (FR-SNC-001, BR-AUTH-001)
PFMS or network temporarily unavailable	Timeout / no response	Request queued for retry at configured intervals; case shown as "Pending" without blocking other portal functions (NFR 6.2)
Bill number already exists for the DDO	Failed — ERRSNC44 ("Bill Number already exists...")	Maker alerted before resubmission; bill number regenerated per BR-SNC-004

8.6 Workflow ↔ Requirement Mapping

Every workflow step is backed by the functional requirement(s) and business rule(s) that implement it:

#	Workflow Step	FR(s)	BR(s)
1	NGO submits application: bank a/c, IFSC, PFMS payee code	FR-NGO-001, FR-NGO-002	BR-NGO-001
2	Review chain (unchanged)	—	—
3	US-PD issues the sanction	—	BR-SNC-002
4	PD Maker prepares payment advice	FR-PDM-001 to 012, FR-HOA-001 to 003, FR-MDM-001 to 005	BR-SNC-004, BR-MDM-001, BR-BAK-001
5	PD Checker authorises + applies DSC	FR-PDC-001 to 006	BR-DSC-001, BR-SNC-002
6	e-Anudaan calls ReceiveSanctionData	FR-SNC-001 to 004, FR-DOC-001 to 003	BR-SNC-001, BR-SNC-003, BR-SNC-005, BR-DOC-001
7	Sanction lands at DDO (PFMS)	FR-STS-001	—
8	DDO bill (RPR-34); PAO passes bill	FR-STS-002	BR-SNC-004
9	Bank executes DBT; UTR generated	FR-STS-003	—
10	e-Anudaan polls status / reconciles feed; notifies NGO	FR-STS-001 to 006, FR-NTF-001, FR-NTF-002	BR-NTF-001, BR-CAN-001

9. Risks & Dependencies

Risk / Dependency	Nature	Impact if Unresolved
Coded head of account (Function/Object Head, Category, Grant No.) not yet finalised by the Bureau	Ministry decision — on critical path	PD Maker screen cannot be populated with valid head-of-account options; sanctions cannot be transmitted
Scheme codes for SHRESTHA Mode-1 and SMILE not yet allotted by PFMS	External dependency — on critical path	Those two schemes cannot onboard to the integration until codes are allotted, even though the design supports them
PFMS agency registration, credentials and IP whitelisting pending	External dependency	No API call can be made until registration is complete; gates all other engineering and testing
Back-fill of bank account details for older sanctioned files (no bank details on record)	Ministry/Bureau action	Such legacy files cannot enter the PD Maker queue until back-filled (BR-BAK-001)
DSC custody and officer nomination for the PD Checker role not yet confirmed	Administrative dependency	PD Checker step cannot go live without a nominated, DSC-holding officer per DDO
SHRESTHA payment mode (TSA vs. hybrid) and Monthly Expenditure Plan certificate mechanism undecided	Ministry decision, pending	SHRESTHA schemes' payment-advice design cannot be finalised until this is settled
UAT environment and a nominated PFMS technical officer not yet provisioned	External dependency	End-to-end testing of the PFMS client cannot begin
Single-call design (ReceiveSanctionData) means any one incomplete field rejects the whole bill	Design characteristic	Incomplete master data or head-of-account mapping causes resubmission overhead rather than partial success
PFMS-published contract may be amended independently of this BRD	Governance	This BRD is superseded wherever the PFMS contract and this document differ (see Document Control)

10. Assumptions & Constraints

- This BRD is based on the decisions of the PFMS integration meeting held on 27 August 2026, and on the published PFMS Claim WebAPI, MasterData WebAPI and Ministry Release & Transfer Entry Data WebAPI specifications; the PFMS-published contract governs wherever it differs from this document.
- Only e-payment mode (PaymentMode = 528) and RPR-34 Grants-in-Aid Bill (RPR Type = 7) are assumed for e-Anudaan disbursements at this stage; cheque payment and other RPR/claim types are out of scope (Section 3.2).
- The existing review-and-approval chain up to the US-PD sanction is assumed unchanged by this integration.
- The NGO's self-entered and confirmed bank account and PFMS payee code are taken at face value by the portal at the application stage; no separate account-validation-before-sanction API is invoked, per the 27 August 2026 decision.
- Scheme codes NAPDDR (3817), AVYAY (3968), SHRESTHA Mode-2 (3964), DDRS (971) and ADIP (1805) are assumed available; SHRESTHA Mode-1 and SMILE codes are assumed to be allotted by PFMS before those schemes go live on this integration.
- DDO, PAO and PD master data are assumed to be kept current by periodic synchronisation; a stale or missing master entry is treated as a blocking condition for submission (BR-MDM-001), not silently bypassed.
- The Maker and Checker roles are assumed to be held by different officers within the Programme Division, consistent with the Maker–Checker control intent.

11. Dashboards & KPIs

Dashboard / KPI	Description
Sanction Pipeline Dashboard	Count of sanctions by current PFMS status — Created, Submitted, PassByPDMaker, PendingDSCPDChecker, Approved, BillGenerated, ..., Closed, Cancelled (see Annexure C for the full status list)
Ageing Report	Days pending at each PFMS stage, DDO-wise, to flag cases stuck beyond a configured threshold
Disbursement Reconciliation	Sanctioned amount vs. credited amount vs. UTR, scheme-wise and DDO-wise, cross-checked against the Ministry Release/Transfer Entry feed
Failure / Exception Report	Count and category of validation failures (ERRSNC*, ERRM*, ERRCC* codes) trending over time, to identify recurring data-quality issues
Claim Reference Pool Utilisation	Numbers drawn vs. consumed vs. remaining, per PD Code and financial year
Turnaround Time KPI	Elapsed time from US-PD sanction to confirmed UTR credit, average and outliers, scheme-wise

12. Glossary / Key Abbreviations

Term	Meaning
PFMS	Public Financial Management System, operated by the Office of the Controller General of Accounts
GIFMIS	Government Integrated Financial Management Information System — the sanction-exchange mechanism (e-Sanction) used by this integration
eSanction	A sanction transmitted to PFMS electronically via API rather than on paper
DDO	Drawing & Disbursing Officer — the PFMS-side officer who draws the bill against a landed sanction
PAO	Pay & Accounts Office / Officer — passes the bill and initiates payment
PD	Programme Division — the Ministry division operating the Maker and Checker steps on e-Anudaan; "PD Code" is its PFMS-registered identifying code
US-PD	Under Secretary, Programme Division — issues the sanction and designates the PD Maker/Checker
IFD	Integrated Finance Division — issues the concurrence recorded on the cost sheet (IFD Number/Date)
RPR	Receipt & Payment Rules — the bill-type classification used by PFMS (this integration uses RPR-34, Grants-in-Aid Bill)
GIA	Grant-in-Aid
DBT	Direct Benefit Transfer
UTR	Unique Transaction Reference — the bank-issued reference confirming credit
DSC	Digital Signature Certificate
NPB Date	Not Payable Before Date — an optional date before which a sanction bill should not be paid
CDDO	Cheque Drawing & Disbursing Officer — relevant only where payment lands below the DDO/PAO level
Scroll	The bank's daily settlement record confirming (or failing) a payment instruction
TE / TD	Transfer Entry / Transfer Entry Data — an accounting adjustment feed retrieved for reconciliation
RD	Release Data — the Ministry's fund-release feed retrieved for reconciliation
BatchId	An identifier grouping sanctions released together in a single PFMS batch
ClaimReferenceNumber	A number pre-issued by PFMS in a batch and consumed one per beneficiary payment, mandatory when IsESanction = 1
Function Head / Object Head / Category / Grant Number	The four coded components of the PFMS "head of account"
VendorUniqueCode / PFMSUniqueCode	The PFMS-issued unique (payee/vendor) code identifying the NGO as a beneficiary
UniqueIdentifier	A unique, non-reusable identifier generated by e-Anudaan for every request message, used for tracking and troubleshooting
Landing Status	The PFMS hierarchy level at which a sanction first arrives (e.g. DDO level), which determines which supporting-document hashes are mandatory

13. Annexures

Reference material — field inventories, code lists and the API inventory — is placed here rather than in the body, for use by the engineering team during build and testing.

Annexure A: ReceiveSanctionData — Field Inventory

A.1 Sanction Header

Field	Mandatory?	Description
UniquelIdentifier	Mandatory	System-generated, non-reusable identifier for the request message
RequestSource	Mandatory	PFMS-issued code identifying e-Anudaan as the originating client
DDOCode	Mandatory	6-digit DDO code selected by the Maker
SanctionNumber / SanctionDate	Mandatory	From the sanction order
SchemeCode	Mandatory	Numeric PFMS scheme code (e.g. NAPDDR 3817, AVYAY 3968)
SanctionAmount	Mandatory	From the sanction order
CreatedBy	Mandatory	Pre-set username of the authorised PD user
PaymentMode	Mandatory	528 = e-payment; 9 = cheque (out of scope, see Section 3.2)
SanctionType	Mandatory	14 = Expenditure (used here); 13 = Transfer; 19 = eAdvice (Transfer)
IFDNumber / IFDDate	Mandatory	From the cost sheet
BillNumber / BillDate	Mandatory*	Auto-generated per DDO per financial year (FR-PDM-005); optional only if landing status is below DDO level
FinancialYear	Mandatory	e.g. "2027" for FY 2026-27
BillStatus	Mandatory	"F" = Fresh bill; "R" = returned bill being resubmitted
NPBDate	Optional	Not Payable Before date
IsESanction	Mandatory	1 for eSanction (used here); makes PD Code and Claim Reference Number mandatory
PDCode	Mandatory (if eSanction)	8-digit PD code selected by the Maker
RPRTType	Mandatory	7 = RPR-34 Grants-in-Aid Bill (fixed for this integration, BR-SNC-003)
PreviousUniquelIdentifier	Optional	Set only when resubmitting a previously failed/cancelled request
BatchId	Optional	Groups sanctions released together in a single PFMS batch
CNAExceptionReason	Conditional	Mandatory only for expenditure sanctions against object head "33" (see Annexure below for reason codes)

A.2 Expenditure Summary — Account Head Details (loop)

Field	Mandatory?	Description
FunctionHead	Mandatory	13-digit coded Function Head
ObjectHead	Mandatory	2-digit coded Object Head
Category	Mandatory	Category code

Field	Mandatory?	Description
GrantNumber	Mandatory	3-digit Grant Number
SumAmount	Mandatory	Amount against this head; the sum across heads must equal the sanction amount

A.3 Beneficiary Details (loop — one per NGO/payee)

Field	Mandatory?	Description
PFMSUniqueCode	Mandatory	NGO's PFMS payee/vendor code, confirmed at application stage (FR-NGO-001)
Name, AccountNumber, IFSCCode	Mandatory	NGO's bank details, confirmed at application stage (FR-NGO-002)
GrossAmount / NetAmount	Mandatory	Net = Gross – deductions, where a deduction is reported
PayeeRemarks	Mandatory	Free-text remarks for the payment (max 25 characters)
ChequeCategory	Optional	Not applicable — e-payment only, in scope (Section 3.2)
ClaimReferenceNumber	Mandatory (if IsESanction=1)	Drawn from the pre-issued PFMS pool (FR-PDM-008, FR-DOC-003); only a PFMS-issued number is accepted
AccountHeadDetails (deduction loop)	Conditional	FunctionHead, ObjectHead, Category, GrantNumber, Amount, AccountType (E=Expenditure, D=Deduction) — required only where a beneficiary-wise deduction applies

A.4 Supporting Document Details (loop)

Field	Mandatory?	Description
DocumentType	Mandatory	See Annexure E for the code list (Claim, Sanction, Copy of Approved Notes, Bill, PAO Passing, Other)
DocumentName	Mandatory	Name of the document
DocumentHash	Mandatory	SHA-256 hash, Base64-encoded (FR-DOC-001), required per the landing-status tier at BR-DOC-001

Annexure B: RPR Type Value Reference

RPR Type "7" (highlighted) is the value used throughout this integration; the remaining values are shown for reference and are out of scope (Section 3.2).

RPR Type	Description
7	RPR-34 Grants-in-Aid Bill — IN SCOPE for this integration
1	RPR-33 Refund of Revenue
2	RPR-43 Refund of Deposit
3	RPR-36 Computer Advance
4	RPR-42 Advance/Withdrawal from GPF/CPF
5	RPR-50 Pension Benefit Details
8 / 9	RPR-23 Medical Charges Reimbursement (CGHS / CSMA)
10 / 11 / 12 / 37	RPR-29 Contingent Bill variants (Advance / Adjustment / Replenishment / Advance Imprest)
13	RPR-44 Payment of Accumulation
14–18	RPR-37 Short Term Advance (Transfer / Tour / LTC / Medical / Others)
19	RPR-36 House Building Advance
20–22	RPR-14 TA-Tour / TA-Transfer / TA-LTC
23–30	RPR-48 Other Personal Claims (Newspaper, Telephone, Hospitality, Conveyance, CEA/Hostel, OT Allowance, Leave Encashment, Others)
31	RPR-46 Refund of Lapsed Deposit
33 / 34	RPR-13 Pay Bill / RPR-13B NPS Nil Bill
35	RPR-51 Withdrawal from Contingency Fund of India
36	RPR-45 Payment of Accumulation under GIS
38	RPR-49 Purchase from GeM

Annexure C: PFMS Sanction Status Reference

The full lifecycle of statuses a sanction can carry at PFMS, as surfaced by GetRequestStatus and used on the Sanction Pipeline Dashboard (Section 11):

Status	Description
Created	Sanction created successfully at PFMS
Submitted	Sanction submitted by PD Maker
PassByPDMaker	Sanction passed by PD Maker
PendingDSCPDChecker	Pending DSC at PD Checker
Approved	Approved by PD Checker
BillGenerated	Bill generated for the sanction
PendingDDODSC	Pending DSC at DDO
DigitallySignedByDDO	Bill DSC-signed by DDO; available at Bill Distributor
PassedByDHForDSC / PendingDHDSCPassOrder	Passed by Dealing Hand; pass order under DSC generation
ForwardedToAAO / PassedByAAOForDSC / PendingAAODSCPassOrder	Progressing through AAO for DSC pass order
ForwardedToPAO / PassedByPAOForDSC / PendingPAODSCPassOrder	Progressing through PAO for DSC pass order
PassedByPAO	Pass order DSC-signed by PAO; under XML generation
XML Generated / DSCBatchGenerated	XML generated; DSC batch generated
PendingDSCBatchFileGenerationSign1 / Sign2	Pending DSC batch file generation at Signatory 1 / 2
DigitalSignatoryLast	Voucher generated
Closed	Sanction closed (terminal — success)
ReturnedBy... / PendingDSCReturnOrder... (various)	Bill/sanction returned at Dealing Hand / AAO / PAO / DDO / PD Checker, each under its own return-order DSC step
FinYrExpired	Financial year expired
Cancelled	Bill/sanction returned by PFMS and marked Cancelled (terminal); see BR-CAN-001

Annexure D: API Inventory

Purpose	API	Category
Obtain one-time auth code	GetAuthCode	Authentication
Exchange auth code for access/refresh token	Login	Authentication
Renew an expiring access token	RefreshToken	Authentication
Push the sanction to the DDO	Sanction/ReceiveSanctionData	Sanction transmission
Track overall request status	GetRequestStatus	Status tracking
Bill detail once generated	GetSanctionBillDetails	Status tracking
Voucher detail once generated	GetSanctionVoucherDetails	Status tracking
Payee-wise payment/UTR detail	GetPayeeEPaymentDetails	Status tracking
Reconcile Ministry release / transfer-entry data	GetPFMSMinistryReleaseAndTEDData (RD / TD)	Reconciliation
DDO eBill activation check	MasterData/GetDDOeBillActivationStatus	Master data
DDO master	MasterData/GetDDO	Master data
PAO master	MasterData/GetPAO	Master data
Controller master	MasterData/GetController	Master data
PD Code master	MasterData/GetPDCode	Master data
Grant Number master	MasterData/GetGrantNumber	Master data
Function Head master	MasterData/GetFunctionHead	Master data
Object Head master	MasterData/GetObjectHead	Master data
Category master	MasterData/GetCategory	Master data
Claim Reference Number pool draw	MasterData/GetClaimReferenceNumber	Master data

Annexure E: Supporting Document Type Codes

Code	Document Type
1	Claim
2	Sanction
3	Copy of Approved Notes
4	Bill
5	PAO Passing
6	Other

Annexure F: US-PD Login — PD Maker Screen, Field List

The table below sets out every field on the PD Maker screen, in the order the Maker completes them, with its source and whether it is auto-filled, selected from a synchronised master, or manually entered.

F.1 Sanction Header (mostly auto-filled from the sanction order and cost sheet)

Field	Source	Mandatory?
Sanction Number	Auto — sanction order	Mandatory
Sanction Date	Auto — sanction order	Mandatory
Sanction Amount	Auto — sanction order	Mandatory
Financial Year	Auto	Mandatory
IFD Concurrence Number	Auto — cost sheet	Mandatory
IFD Concurrence Date	Auto — cost sheet	Mandatory
Scheme Code	Auto — scheme master	Mandatory
DDO Code	Maker selects — synchronised PFMS master (FR-MDM-001)	Mandatory
PD Code	Maker selects — synchronised PFMS master (FR-MDM-003)	Mandatory
Payment Mode	System-set: "528 — e-payment"	Mandatory (fixed)
Sanction Type	System-set: "14 — Expenditure"	Mandatory (fixed)
RPR Type	System-set: "7 — RPR-34 GIA Bill"	Mandatory (fixed)
Bill Status	System-set: "F — Fresh" (or "R" on resubmission)	Mandatory (system-derived)
Bill Number	Auto-generated — DDO + financial-year series	Mandatory
Bill Date	Auto — date of preparation	Mandatory
NPB Date (Not Payable Before)	Maker entry	Optional
Is eSanction	System-set: 1	Mandatory (fixed)
UniqueIdentifier	System-generated	Mandatory (system)
Previous Unique Identifier	System — set only on resubmission	Conditional

F.2 Head of Account (coded, per scheme configuration)

Field	Source	Mandatory?
Function Head (13-digit)	Maker selects — synchronised master (FR-MDM-002)	Mandatory
Object Head (2-digit)	Maker selects — synchronised master	Mandatory
Category	Maker selects — synchronised master	Mandatory
Grant Number (3-digit)	Maker selects — synchronised master	Mandatory
Amount against this head	Auto-split, or Maker entry if multiple heads apply	Mandatory

F.3 Beneficiary / NGO Payment Details (one row per beneficiary)

Field	Source	Mandatory?
NGO Name (as per PFMS)	Auto — NGO application	Mandatory
PFMS Unique / Payee Code	Auto — NGO application (FR-NGO-001)	Mandatory

Field	Source	Mandatory?
Bank Account Number	Auto — NGO application, confirmed (FR-NGO-002)	Mandatory
IFSC Code	Auto — NGO application, confirmed	Mandatory
Gross Amount	Auto / Maker adjustment	Mandatory
Net Amount	Auto — Gross minus deduction, where applicable	Mandatory
Payee Remarks	Maker entry (max 25 characters)	Mandatory
Claim Reference Number	System — drawn from the PFMS-issued pool (FR-PDM-008)	Mandatory (IsESanction=1)
Deduction Head details (Function/Object/Category/Grant + Amount)	Maker entry	Conditional — only if a deduction applies

F.4 Supporting Documents

Field	Source	Mandatory?
Document Type (Claim / Sanction / Approved Notes / Bill / PAO Passing / Other)	Maker selects	Mandatory — per landing-status tier (BR-DOC-001)
Document Name	Maker uploads / system	Mandatory
Document Hash (SHA-256)	System — auto-computed on upload	Mandatory
View Link	System — auto-generated, single-use	Mandatory

Screen controls: Save as Draft (returns the case to the Maker queue without submitting); Submit for Authorisation (moves the case to the PD Checker queue and locks it from further Maker edits).

Annexure G: US-PD Login — PD Checker Screen, Field List

The Checker screen mirrors every field in Annexure F as read-only, placed alongside the original sanction order for comparison, plus the following authorisation-specific controls:

Field / Control	Source	Mandatory?
Sanction Header, Head of Account, Beneficiary Detail, Supporting Documents	Read-only mirror of the Maker's entries (Annexure F)	Displayed, not editable
Original Sanction Order (for comparison)	Auto — e-Anudaan sanction record	Displayed
Checker Remarks	Checker entry — mandatory only when returning to Maker	Conditional
Digital Signature Certificate (signing action)	Checker's own DSC token/certificate	Mandatory to Approve
Action: Approve & Sign	Checker action — triggers DSC signing then ReceiveSanctionData transmission	One of Approve / Return required
Action: Return to Maker	Checker action — requires Checker Remarks	One of Approve / Return required
