

Manual UX Audit

dosje.gov.in

About UX4G

User Experience for Government Applications (UX4G) is an initiative under the Digital India Programme, by the Ministry of Electronics and Information Technology (MeitY), being implemented by National e-Governance Division (NeGD).

Key Products & Support by UX4G

UX4G Handbook

A comprehensive set of guides to uphold good UX/UI practices

[Learn More >](#)

UX4G Design System

A GIGW-compliant digital library of reusable components and a code repository simplifies Design & development.

[Learn More >](#)

Free Accessibility Widget

A plug-and-play widget ensures digital platforms are accessible to all users, meeting accessibility standards.

[Learn More >](#)

Audit 360 (Beta Version)

An automated UX audit tool to generate multi-page report on performance and compliance evaluations, ensuring best practices and accessibility standards.

[Learn More >](#)

Self UX Health Check : For Websites & Mobile Apps

A comprehensive tool for compliance/audit parameters on good UX/UI practices.

[Learn More >](#)

Capacity-Building Workshops

UX4G sensitizes officials to UI/UX, design thinking, and address challenges in creating effective online service experiences.

[Learn More >](#)

Advisory to Providers

- Adopt Design System by Designers and Developers
- Use UX Health Self Check tool (Manual UX Audit)
- Use Audit 360 Tool (AI based automated UX Audit)
- Deploy Accessibility Widget on Websites
- Adopt User Experience Handbook for Guidance on UX/UI enhancement
- Include the above usage in SoW/TOR of related Procurement Documents
- Deploy UX specific professionals for long-term improvement.
- Publish the link - www.ux4g.gov.in on the Portals

UX Audit

Areas of focus for the UX Audit -

1. User Flow and Navigation
2. Visual Design and Layout
3. Interaction Design
4. Features
5. Accessibility
6. UX Writing

UX/UI Principles

Evaluating the UX/UI of the app based on Jakob's Usability Heuristics for user interface design and other industry-standard UX principles

The Challenge

Usability & Navigation: Complex navigation and information-heavy sections make it difficult for first-time users to find relevant services and complete tasks.

Accessibility & Inclusivity: Dense content, inconsistent hierarchy, typography, and interaction patterns create barriers for elderly users, users with disabilities, and users with low digital literacy.

Content & Clarity: Long-form content, technical terminology, and inconsistent labels make important information difficult to understand and scan.

Mobile Experience: Content density, excessive scrolling, and small or inconsistent interaction areas reduce usability across smaller screens.

Consistency & Trust: Inconsistent components, CTAs, status communication, and feedback patterns make the experience less predictable and can reduce user confidence.

Findings & Recommendations

01. Competing CTAs dilute the primary user action

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user is presented with **three equally prominent** actions like Our Team, Our Ministry, and Our Reports, at the end of the About Us section. Because all three receive the **same visual treatment**, the interface does not establish a clear priority and forces the user to decide where to go next.

Heuristic / Guideline:

Nielsen - Aesthetic and Minimalist Design; Visual Hierarchy;
GIGW - Consistency & Ease of Navigation.

Recommendation:

Define a **clear primary action** and **reduce the visual weight of secondary actions**. Where possible, place these links within the sections they relate to rather than grouping unrelated destinations together. Also usage of secondary CTA can be done accordingly. Or else only About US CTA should be present over there

About Us

The Department of Social Justice & Empowerment (DoSJE) is mandated to ensure the empowerment and welfare of India's most vulnerable groups, including Scheduled Castes, OBCs, Senior Citizens, Transgender Persons, and victims of substance abuse. We implement various targeted schemes for their social, educational, and economic development, ensuring their inclusion despite challenges like the lack of updated demographic data.

The Ministry of Social Justice & Empowerment works to uplift India's most vulnerable communities through targeted initiatives, inclusive growth, and compassionate governance.

[Our Team >](#)

[Our Ministry >](#)

[Our Reports >](#)

Dr. Virendra Kumar
Union Minister of Social Justice
and Empowerment

Shri Ramdas Athawale
Minister of State of Social
Justice and Empowerment

Shri B. L. Verma
Minister of State of Social
Justice and Empowerment

Findings & Recommendations

02. The About Us section is competing with too many information types

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user encounters departmental information, a highlighted statement, ministerial profiles and navigation CTAs within the same viewport. Instead of establishing a single narrative about the department, the section behaves like **multiple modules compressed into one area**.

Heuristic / Guideline:

Nielsen #8 - Aesthetic and Minimalist Design; Information Hierarchy.

Recommendation:

Give the section **one clear purpose**: explain who the department is and what it does. Move leadership profiles and secondary navigation into dedicated sections. Showcasing purpose of the ministry and then name of the Honourable ministers can be showcased

About Us

The Department of Social Justice & Empowerment (DoSJE) is mandated to ensure the empowerment and welfare of India's most vulnerable groups, including Scheduled Castes, OBCs, Senior Citizens, Transgender Persons, and victims of substance abuse. We implement various targeted schemes for their social, educational, and economic development, ensuring their inclusion despite challenges like the lack of updated demographic data.

The Ministry of Social Justice & Empowerment works to uplift India's most vulnerable communities through targeted initiatives, inclusive growth, and compassionate governance.

Justice and Empowerment

Shri B. L. Verma
Minister of State of Social
Justice and Empowerment

Findings & Recommendations

03. Statistics are visually overpowering the introductory content

Severity: Medium

Platform: Desktop & Mobile

Finding:

The large blue statistics panel uses strong colour, oversized numbers and a high-contrast CTA immediately after the About Us content. This creates a **visual interruption** and can **pull the user's attention away** from understanding the department.

Heuristic / Guideline:

Nielsen #8 - Aesthetic and Minimalist Design; Visual Hierarchy.

Recommendation:

Treat statistics as a **distinct Impact / At a Glance module**. **Increase separation** from About Us and reduce the visual weight if the statistics are not a primary user task.

Findings & Recommendations

04. Section-to-section spacing does not provide sufficient visual breathing room

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user moves through several high-information sections with **inconsistent vertical spacing**. Where **sections sit too close** together, their boundaries become less apparent and the overall **page feels denser** than it actually is.

Heuristic / Guideline:

Nielsen #8 - Aesthetic and Minimalist Design; Gestalt Principle of Proximity.

Recommendation:

Establish a **defined vertical spacing system** between sections. Major content groups should have **enough whitespace** to signal a clear change in context.

Findings & Recommendations

05. About Us is written for a reader, not a homepage scanner

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user is presented with a **long introductory paragraph** before reaching **actionable content**. Homepage users typically scan before committing to reading, so the current treatment delays comprehension of the department's purpose.

Heuristic / Guideline:

Nielsen #6 - Recognition Rather Than Recall; Cognitive Accessibility.

Recommendation:

Reduce the introduction to a **concise statement** covering purpose + audience + key role, followed by a **clear Read More action**.

Findings & Recommendations

06. Section subtext is visually merging with body copy

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user **cannot immediately distinguish** the section introduction from the explanatory body text because both use a **similar typographic treatment**. This weakens the content hierarchy and makes the **page harder to scan**.

Heuristic / Guideline:

WCAG 1.3.1 - Info and Relationships; Visual Hierarchy.

Recommendation:

Create a **consistent heading pattern**:

- Section Title
- Short section description
- Then use a clearly differentiated style for supporting body content.

Our Organisations

Explore our schemes, career opportunities, and business partnerships

The Ministry of Social Justice and Empowerment works through key organisations that drive social inclusion, economic empowerment, and equal opportunity across India.

- Promotes equality and social participation for all communities.
- Builds skills and education pathways for self-reliance.
- Enables financial inclusion and livelihood opportunities.
- Provides rehabilitation and welfare support for vulnerable groups.

Findings & Recommendations

07. Body copy has insufficient line-height

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user encounters **tightly stacked lines** in several content blocks. When text wraps across multiple lines, the reduced separation between lines makes paragraphs harder to scan and **increases reading effort**.

Heuristic / Guideline:

WCAG 1.4.12 - Text Spacing; Readability & Legibility.

Recommendation:

Target approximately **1.5–1.6× line-height for body copy** and validate the layout at increased text sizes and mobile widths.

Our Organisations

Explore our schemes, career opportunities, and business partnerships

The Ministry of Social Justice and Empowerment works through key organisations that drive social inclusion, economic empowerment, and equal opportunity across India.

- Promotes equality and social participation for all communities.
- Builds skills and education pathways for self-reliance.
- Enables financial inclusion and livelihood opportunities.
- Provides rehabilitation and welfare support for vulnerable groups.

Findings & Recommendations

08. Extended italic text compromises readability

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user is required to read an entire set of important statements in italic type. Italic styling introduces **more complex letterforms and reduces readability** for users with low vision, blurred vision or reading difficulties. Switching within multiple typo make it difficult for the end user to consume information

Heuristic / Guideline:

WCAG 1.4.12 - Text Spacing; Inclusive Typography.

Recommendation:

Use regular text for essential information. **Reserve italics for short emphasis** rather than entire paragraphs or bullet lists.

Findings & Recommendations

09. Bullet-list spacing lacks a consistent reading rhythm

Severity: Low

Platform: Desktop & Mobile

Finding:

The user sees **tightly grouped bullet** points while larger gaps exist between surrounding content. The inconsistent rhythm makes the content block feel **visually unbalanced**.

Heuristic / Guideline:

Nielsen #8 - Aesthetic and Minimalist Design; Readability.

Recommendation:

Introduce consistent spacing between bullet items and **establish a clear relationship** between the introductory paragraph and the list.

Findings & Recommendations

10. Organisation cards lack consistent internal spacing

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user sees different **amounts of whitespace** between logos, organisation names and descriptions depending on the content length. This makes the card grid appear **inconsistent and reduces scanability. Placement of Tags used on top placement clashing with the cards at bottom**

Heuristic / Guideline:

Nielsen #4 - Consistency and Standards.

Recommendation:

Define **fixed spacing tokens** and a common card structure:

Logo → Organisation Name → Description also all the cards should aligned horizontally and vertically

Findings & Recommendations

11. Variable content length creates uneven card composition

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user encounters cards with **significantly different text lengths**, causing some cards to feel **visually empty while others feel crowded**. This makes it harder to compare organisations at a glance.

Heuristic / Guideline:

Nielsen #4 - Consistency and Standards; Nielsen #8.

Recommendation:

Set **controlled text lengths** and consistent content areas. **Truncate excessive content** and provide the full description on the destination page. Also follow consistent typography and colours also use colours that blends with each other

Findings & Recommendations

12. Acronyms create an unnecessary comprehension barrier

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user is required to interpret acronyms such as NCSC, NCSK and NCBC before understanding the organisation. This particularly affects first-time visitors who may not be familiar with government terminology.

Heuristic / Guideline:

Nielsen #2 - Match Between System and the Real World;

Nielsen #6 - Recognition Rather Than Recall.

Recommendation:

Lead with the full organisation name and treat the acronym as secondary information.

Findings & Recommendations

13. Organisation cards do not establish a clear user outcome

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user can identify the organisation but cannot immediately understand **what they will find by selecting it**. The card communicates who the organisation is, but not what the user can do there.

Heuristic / Guideline:

Nielsen #2 - Match Between System and the Real World.

Recommendation:

Add an **outcome-oriented CTA such as View Services, Explore Schemes, Visit Portal or Learn More, based on the actual destination. A redirection point for should be included for more information if users wants to know the same**

Findings & Recommendations

14. Our Offerings is carrying too much information for a discovery section

Severity: High

Platform: Desktop & Mobile

Finding:

The user is asked to process category labels, long scheme titles, detailed descriptions and CTAs across multiple cards while simultaneously processing the What's New panel. The section has **become a content repository rather than a discovery experience.**

Heuristic / Guideline:

Nielsen #8 - Aesthetic and Minimalist Design; Cognitive Accessibility.

Recommendation:

Reduce the card to the information required for decision-making:

Category → Scheme Name → Short Summary → View Scheme

Move detailed scheme information to the respective detail page.

Findings & Recommendations

15. What's New is competing with the user's primary task

Severity: High

Platform: Desktop & Mobile

Finding:

The user is simultaneously exposed to schemes and a large What's New panel containing lengthy announcements. These represent two different user intents like finding a service and consuming updates but are given **comparable visual prominence**.

Heuristic / Guideline:

Nielsen #8 - Aesthetic and Minimalist Design; Information Architecture.

Recommendation:

Separate What's New into a dedicated Latest Updates & Announcements section and allow the user to focus on one task at a time.

Findings & Recommendations

16.Card CTAs need consistent anchoring

Severity: Low

Platform: Desktop & Mobile

Finding:

Because scheme descriptions vary in length, the user may encounter CTAs at different vertical positions. This **disrupts the visual rhythm** when comparing cards.

Heuristic / Guideline:

Nielsen #4 -Consistency and Standards.

Recommendation:

Create a fixed **card-footer region and anchor Know More consistently** to the bottom of every card. Consistent cards and content within the same will enhance the readability and users can consume information with ease and take necessary action if required

Findings & Recommendations

17. Persona carousel does not communicate position or total content

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user sees navigation arrows but **no pagination or position indicator**. Users cannot determine whether there are two, five or ten additional personas available.

Heuristic / Guideline:

Nielsen #1 - Visibility of System Status; WCAG 2.4.4.

Recommendation:

Add pagination indicators and ensure carousel controls have descriptive accessible labels.

Findings & Recommendations

18. Persona terminology assumes government-domain knowledge

Severity: High

Platform: Desktop & Mobile

Finding:

The user **may not immediately understand labels** such as Beneficiary or other government-specific roles. This creates a comprehension barrier at exactly the point where the interface is supposed to simplify navigation.

Heuristic / Guideline:

Nielsen #2 - Match Between System and the Real World; Plain Language; WCAG 3.1.3.

Recommendation:

Use citizen-first terminology. Specific micro-copies which can be un understandable by user easily

Findings & Recommendations

19. "No Image" is perceived as a broken content state

Severity: Medium

Platform: Desktop & Mobile

Finding:

When an image is unavailable, the user encounters a generic **No Image placeholder**. Rather than feeling like an intentional design state, it can be interpreted as missing or failed content.

Heuristic / Guideline:

Nielsen #5 - Error Prevention; Error Recovery.

Recommendation:

Create a designed fallback state with appropriate visual treatment or remove the image container entirely when imagery is not meaningful to the content. Create a graphics or thumbnail where images are missing

Findings & Recommendations

20.Resource CTAs are not consistently positioned

Severity: Low

Platform: Desktop & Mobile

Finding:

The user sees View Details positioned around the centre/right of some resource cards rather than consistently at the bottom. This weakens the relationship between the resource content and its action.

Heuristic / Guideline:

Nielsen #4 - Consistency and Standards.

Recommendation:

Anchor the action to a consistent footer area within each resource card.

Findings & Recommendations

21. Empty social-feed states make the homepage appear incomplete

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user encounters large social-media containers where **meaningful content is unavailable**. The resulting empty space can be perceived as a broken feed and adds visual weight without providing value.

Heuristic / Guideline:

Nielsen #5 - Error Prevention.

Recommendation:

Use an intentional empty state or suppress the platform when content is unavailable.

Findings & Recommendations

22. Partner logos lack a consistent visual system

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user sees **logos with different dimensions, aspect ratios, background treatments and visual weights**. This makes the ecosystem section feel assembled rather than intentionally designed.

Heuristic / Guideline:

Nielsen #4 - Consistency and Standards.

Recommendation:

Use a **standard logo container** with consistent dimensions, padding and alignment. Preserve the original aspect ratio and use approved official assets.

Findings & Recommendations

23. Carousel controls have low discoverability

Severity: High

Platform: Desktop & Mobile

Finding:

The user may overlook the **small navigation arrow** positioned at the edge of the content. If the control is not immediately visible, users may incorrectly assume that no additional content is available.

Heuristic / Guideline:

Nielsen #1 - Visibility of System Status; WCAG 1.4.11 - Non-text Contrast.

Recommendation:

Increase control size and contrast, provide an adequate interaction area, and introduce pagination or another clear indication of additional content.

Findings & Recommendations

24.CTA language lacks a controlled interaction vocabulary

Severity: Medium

Platform: Desktop & Mobile

Finding:

The user encounters Know More, View Details, View Online, View All, Explore, View Dashboard, etc. across the page. Although these actions may have different destinations, the **inconsistent language increases** the cognitive effort required to interpret actions.

Heuristic / Guideline:

Nielsen #4 - Consistency and Standards; Nielsen #2 - Match Between System and the Real World.

Recommendation:

Establish a controlled CTA vocabulary based on the actual outcome:

- View Details — content detail
- View Document — document/PDF
- View All — complete listing
- Apply Now — application
- Track Application — tracking
- Learn More — additional context

Findings & Recommendations

25.The homepage does not establish a clear citizen entry point

Severity: High

Platform: Desktop & Mobile

Finding:

A first-time user can understand that this is a government department website, but the homepage does not immediately answer the more important question: “What can I do here?”

The user is introduced to campaigns, leadership, statistics and departmental information before being given a clear task-oriented starting point.

Heuristic / Guideline:

Nielsen #6 - Recognition Rather Than Recall; Nielsen #2 - Match Between System and the Real World; GIGW.

Recommendation:

Introduce a prominent citizen task module immediately after the hero:

How can we help you?

Find a Scheme | Find a Service | Check Eligibility | Apply | Track Application

The first interaction should be based on what the user wants to accomplish, not how the department is organised.

Thank you
