SCREENS

Each finding is pinned on the side-by-side screenshots and detailed below with its exact fix and severity.

⚠ These recur on every screen of every role — the shared gov-bar and masthead, audited once.

Global — Application Shell (gov-bar & masthead, all roles) · header-band

NHA-SHELL-001 – NHA-SHELL-003

NHAPOA — National Helpline Against Atrocities (UAT) — Design QC · 2026-07-03

[Figma frame ↗](#) [Live page ↗](#)

1 Accessibility controls & UX4G widget trigger

Major

NHA-SHELL-001

Accessibility

DESIGN — FIGMA INTENT

Gov-bar carries the full GIGW accessibility cluster inline — text-size A-/A/A+, contrast toggle, an accessibility icon, and a language selector — and the accessibility icon is the trigger for the UX4G Accessibility Widget.

BUILD — LIVE

Build shows only a reduced 'अ/A' glyph in the gov-bar and instead launches the UX4G Accessibility Widget from a separate floating button over the page content.

FIX

Surface the full accessibility controls in the gov-bar and include the accessibility icon; trigger the UX4G Accessibility Widget FROM that gov-bar icon rather than from a floating button.

2 Digital India logo is rendered as text, not the official mark

Minor

NHA-SHELL-002

Content & Iconography

DESIGN — FIGMA INTENT

Masthead uses the official Digital India logo lockup (correct brand wordmark + swoosh).

BUILD — LIVE

Build reproduces the 'Digital India' wordmark as styled HTML text (a serif approximation), so the lockup does not render as the official logo.

FIX

Use the official Digital India logo asset (SVG) for the wordmark so it renders correctly, instead of approximating it with a text font.

3 Redundant dropdown chevron on the profile avatar

Nit

NHA-SHELL-003

Components & States

DESIGN — FIGMA INTENT

Design profile block is the avatar + name/role, with no separate dropdown chevron.

BUILD — LIVE

Build adds a downward chevron beside the avatar. A profile avatar is a conventional, self-evident click target, so the chevron is redundant affordance.

FIX

Drop the chevron to match the design (the avatar itself opens the menu), or if a chevron is wanted for affordance, add it to the design so both stay in sync.

⚠ Row styling (SLA pills, Status pills, ID links, header surface) conforms to the design — verified on a seeded (SHO / Dhule) table. Only the control radius differs.

Global — Lists & Tables (row controls) · table

[Figma frame ↗](#) [Live page ↗](#)

1 Row-action & pagination buttons use a 6px radius, not the 8px token

Minor

NHA-TABLE-001

Components & States

DESIGN — FIGMA INTENT

Corner-radius token is 8px; primary and secondary buttons (Export, Sign In, Send OTP, Start Investigation) correctly render at 8px.

BUILD — LIVE

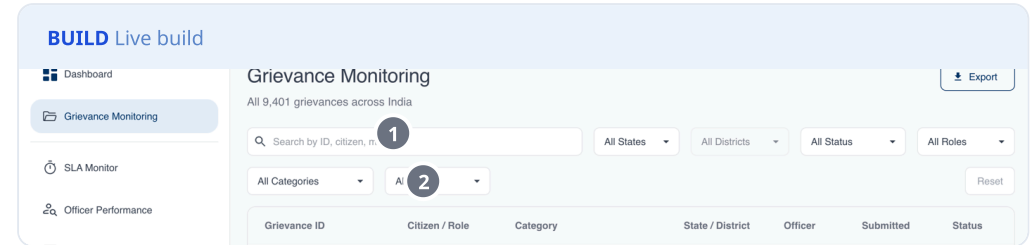

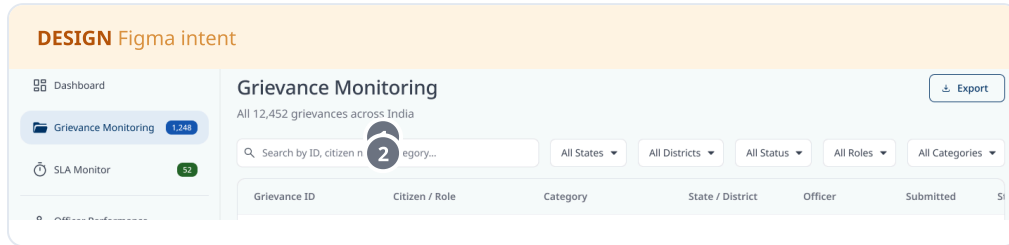

Table row-action buttons (View, Edit, Deactivate, Reassign) and the pagination Prev/Next controls render at 6px instead — an inconsistent radius on the same button family.

FIX

Set the row-action and pagination buttons to the 8px radius token (or, if a smaller radius is intended for compact controls, define a documented small-control radius token and apply it consistently).

Global — Filters & Inputs · toolbar

NHA-FILTER-001 – NHA-FILTER-002

NHAPOA — National Helpline Against Atrocities (UAT) — Design QC · 2026-07-03

[Figma frame ↗](#) [Live page ↗](#)**1 Inputs and selects use two different border tokens**

Nit

NHA-FILTER-001

Color & Token

DESIGN — FIGMA INTENT

Design inputs and selects share one neutral stroke token.

BUILD — LIVE

Build renders text inputs (search, username, mobile) with a #d1d5db border but the filter selects with a lighter #e5e7eb border — two tokens for the same control family.

FIX

Bind text inputs and filter selects to the single input-stroke token so all field borders match.

2 Filter toolbar wraps to a second row

Nit

NHA-FILTER-002

Layout & Spacing

DESIGN — FIGMA INTENT

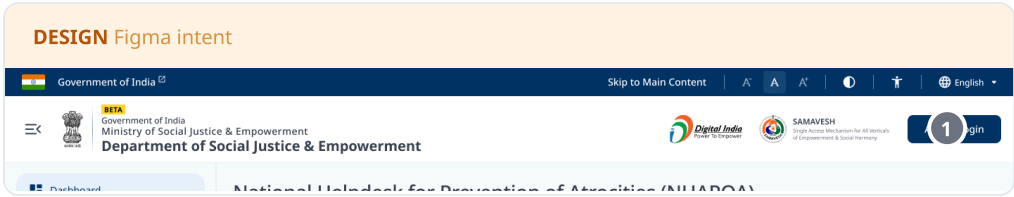

Design filter toolbar sits on a single row alongside the search field.

BUILD — LIVE

Build's search field is wide, pushing the filter selects onto a second row.

FIX

Reduce the search field width so the filter selects fit on the same row as the search, keeping the toolbar to one line.

NHAPOA — National Helpline Against Atrocities (UAT) — Design QC · 2026-07-03

[Figma frame ↗](#) [Live page ↗](#)

1 'Admin Login' entry point is absent from the citizen masthead

Nit

NHA-CITHOME-001

Components & States

DESIGN — FIGMA INTENT

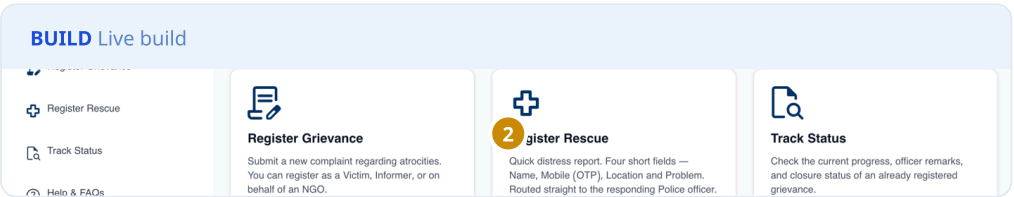

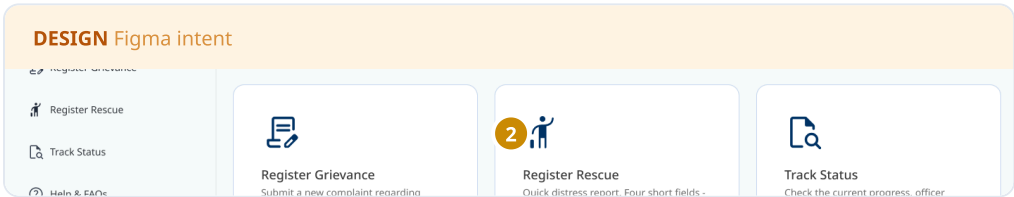

Design masthead (top-right) carries an 'Admin Login' button.

BUILD — LIVE

Build citizen home has no Admin Login entry; officers reach the portal via a separate URL.

FIX

Good-to-have: add the Admin Login button to the citizen masthead per design, or confirm it intentionally lives only on the officer subdomain.

NHAPOA — National Helpline Against Atrocities (UAT) — Design QC · 2026-07-03

[Figma frame ↗](#) [Live page ↗](#)

2 Register Rescue card uses a different icon than the design

Minor

NHA-CITHOME-002

Content & Iconography

DESIGN — FIGMA INTENT

Design 'Register Rescue' action card uses a person-in-distress / rescue figure icon (navy).

BUILD — LIVE

Build's 'Register Rescue' card uses a plus / medical-cross icon instead. Card frame, text and layout otherwise match the design.

FIX

Use the person-in-distress figure icon from the design for the Register Rescue card so the iconography matches.

Role Coverage — audited against the visual language

⚠ All six roles captured and audited against the design's visual language. Citizen (public) — fully designed, audited. District Officer, State Authority, Finance Officer, System Administrator, Central Authority and SHO (Station House Officer) — dashboards, lists, forms and empty/populated states conform to the shared shell, card, table and chart language; the Global findings above apply across all of them. SHO (westdeopur_ps1, Dhule) is a District-Officer-role account with seeded cases and was used to verify row-level table styling. Build-side additions that are not yet in the Figma design (extra sections, filters, nav items, the profile menu, the citizen chatbot widget) are listed in the separate Design Suggestions document — they conform to the visual language and are for the design team to fold into the frames, not build defects.

Deferred — by decision

3 Parked

NHA-DEF-001 Citizen Grievance Registration steps 02–05 + OTP states

Gated behind mobile-OTP verification that cannot be completed headless. Step 01 (Details) captured; deeper steps deferred.

NHA-DEF-002 Track-Status result views (with-ID / with-Mobile)

Require a valid registered grievance reference to render results. Landing form captured; result states deferred.

NHA-DEF-003 Case-Detail tabs + modals/toasts/drawers

Documents / Investigation / Clarification / Audit-Log tabs open on a per-case route (/cases/:id). Now reachable via SHO's seeded cases — schedule a focused capture pass to audit them.
