

NHAPOA — National Helpline Against Atrocities (UAT) · Design-side Recommendations

Separate from the dev fidelity report: token decisions, Figma frame updates, and screens that exist live but have no design yet. 2026-07-03

A — Program-level token decisions

- 1

Corner-radius token for compact/table controls

Decide

NHA-SG-A1
- OBSERVED

Primary/secondary buttons use the 8px radius token; table row-action and pagination buttons render at 6px.

RECOMMENDATION

Decide whether compact controls should follow the 8px token or a dedicated documented small-control radius, then apply consistently across the estate.
- 2

Single input-stroke token for inputs and selects

Decide

NHA-SG-A2
- OBSERVED

Text inputs use a #d1d5db border while filter selects use a lighter #e5e7eb border.

RECOMMENDATION

Define one input-stroke token and bind both text inputs and selects to it.

B — Updates to existing Figma frames

- 3

Add the extra State dashboard sections to the frame

Design

NHA-SG-B1
- OBSERVED

The live State Authority dashboard renders 'Case Status Breakdown' and 'Stale Cases' sections below the designed content; they follow the shared card/chart language.

RECOMMENDATION

Fold these two sections into the State dashboard Figma frame so the composition is specified.
- 4

Add the extra System-Admin filter + nav to the frame

Design

NHA-SG-B2
- OBSERVED

The live grievance-monitoring screen adds an 'All Cases' filter, a 'Reset' button and a 'Grievance Categories' sidebar item, not present in the design frame; all conform to the visual language.

RECOMMENDATION

Add these controls to the System-Administrator frames so the toolbar and sidebar are fully specified.
- 5

Specify the profile menu (avatar dropdown)

Design

NHA-SG-B3
- OBSERVED

The build's masthead avatar opens a profile dropdown (with a chevron); the design shows only the avatar.

RECOMMENDATION

Decide the profile-menu pattern and add it to the design (avatar-as-trigger, chevron optional) so design and build match.
- 6

Document the citizen floating chatbot/emblem widget

Design

NHA-SG-B4
- OBSERVED

The citizen pages show a second floating widget (an emblem/chatbot bubble) besides the accessibility launcher; it is not in the design.

RECOMMENDATION

Add the chatbot widget to the design (placement, size, states) or remove it if unintended; keep it from overlapping page content.
- 7

Fix frame-name corruption in the handoff file

Design

NHA-SG-B5
- OBSERVED

Several frames are mis-parented/mis-named — e.g. a 'District-Officer/Notifications' frame sits inside the State Authority section, and 'Central-Authority/Fund-Allocation' is reused for both Reports and Notifications.

RECOMMENDATION

Rename/re-parent the affected frames to their correct role/screen so the handoff maps cleanly to the build routes.
- ## C — Screens built live with no design (proposals needed)
- 8

Design the System-Admin analytics screens

Propose

NHA-SG-C1
- OBSERVED

Officer Performance, Grievance Analytics and Geographic View exist in the build but have no Figma frames.

RECOMMENDATION

Produce frames for these; the build versions reuse the shared shell/cards/charts and are a reasonable starting point.
- 9

Design the Central Authority screens

Propose

NHA-SG-C2
- OBSERVED

Central Authority Dashboard, State Comparison and Scheme Performance are built but undesigned.

RECOMMENDATION

Produce frames; the build conforms to the visual language and can seed the design.
- 10

Design the Finance Fund-Utilisation report

Propose

NHA-SG-C3
- OBSERVED

The Finance 'Fund Utilisation Report' screen is built but has no Figma frame.

RECOMMENDATION

Produce a frame consistent with the other Finance screens.
