

Audit 360 Report

Audit your website's UX, Performance, Accessibility, SEO, and more with AI

About UX4G

User Experience for Government Applications (UX4G) is an initiative under the Digital India Programme, by the Ministry of Electronics and Information Technology (MeitY), being implemented by National e-Governance Division (NeGD).

Key Products & Support by UX4G

UX4G Handbook

A comprehensive set of guides to uphold good UX/UI practices

[Learn More >](#)

UX4G Design System

A GIGW-compliant digital library of reusable components and a code repository simplifies Design & development.

[Learn More >](#)

Free Accessibility Widget

A plug-and-play widget ensures digital platforms are accessible to all users, meeting accessibility standards.

[Learn More >](#)

Audit 360 (Beta Version)

An automated UX audit tool to generate multi-page report on performance and compliance evaluations, ensuring best practices and accessibility standards.

[Learn More >](#)

Self UX Health Check : For Websites & Mobile Apps

A comprehensive tool for compliance/audit parameters on good UX/UI practices.

[Learn More >](#)

Capacity-Building Workshops

UX4G sensitizes officials to UI/UX, design thinking, and address challenges in creating effective online service experiences.

[Learn More >](#)

Advisory to Providers

- Publish the link - www.ux4g.gov.in on the Portals
- Adopt User Experience Handbook for Guidance on UX/UI enhancement
- Adopt Design System by Designers and Developers
- Deploy Accessibility Widget on Websites
- Use UX Health Self Check tool
- Use Audit 360 Tool
- Include the above usage in SoW/TOR of related Procurement Documents
- Deploy UX specific professionals for long-term improvement.

UX4G Compliances

UX4G Compliances will help you calculate the compliance rating of your website based on UX4G Parameters.

All UX4G Compliances:

- Marked as Compliant:
- Marked as Non-Compliant:
- Marked as Not Applicable:

UI/UX Guidelines (GIGW)

GIGW Compliances evaluate your website's adherence to Indian Government UI/UX guidelines.

All GIGW Compliances: 20

- Marked as Compliant: 12
- Marked as Non-Compliant: 7
- Marked as Not Applicable: 1

Scalability and Future Proofing

- 1. Your webpage must be scalable for new features and services.

User Journey Mapping

- 1. Your webpage should emphasis on simple, progressive journeys for citizens (Application → Status → Outcome).

Reason: The homepage provides key entry points such as Apply Online, Admit Card, Results, Examination Notification, and Exam Calendar, but the end-to-end citizen journey is not presented as a single progressive flow. Users must infer the sequence across multiple sections instead of being guided through Application → Status → Outcome in one clearly structured pathway.

Solution: Introduce a dedicated citizen journey section near the top of the homepage with clearly ordered steps such as Apply, Download Admit Card, Check Exam Schedule, View Results, and Access Further Actions. Use numbered cards or a horizontal process bar with concise labels and direct links.

Navigation Simplicity

- 1. Your webpage should be minimal, clean, top-level navigation preferred (max 2-3 clicks to important sections).

Information Architecture (IA)

- 1. Your webpage should have a logical, hierarchical content structure that is easy to browse.

Search Functionality

- 1. Your webpage must include a visible and easy-to-use search functionality.

Mobile-First and Responsive Design

- 1. Your webpage should use responsive design to support mobile, tablet, and desktop devices.

Accessibility Focus

- 1. Your webpage should meet basic accessibility standards aligned with WCAG 2.0/2.1 guidelines.

Reason: The page shows some accessibility aids such as skip to content, font size controls, and visible contrast-related controls, but there are concerns from the provided view: small text in several sections, dense footer links, carousel-based hero content, and unclear evidence of full keyboard focus visibility, ARIA support, alt-text quality,

semantic landmarks, and screen-reader optimized interaction. This is insufficient to conclude basic WCAG-aligned compliance.

Solution: Conduct a WCAG 2.1 AA audit and improve keyboard navigation, visible focus indicators, semantic heading order, alt text for informative images, contrast validation, accessible labels for icons and controls, carousel pause/announce behavior, and screen-reader compatibility across menus, cards, and footer links.

Consistent Iconography and Imagery

1. Your webpage icons and images must aid navigation and not confuse users. ✓

Content Simplicity

1. Your webpage should use simple, jargon-free, and citizen-friendly language. ✗

Reason: Several labels and content areas use formal institutional terminology and abbreviations such as RTI, CMS, VMS, constitutional references, and department-specific terminology that may not be immediately clear to all citizens. The homepage is functional, but not consistently simplified for first-time or low-literacy users.

Solution: Rewrite key headings, quick links, and service labels using plain language with short helper text. Expand abbreviations on first use and add citizen-friendly descriptors such as 'Apply for Exams', 'Check Your Result', and 'Book Appointment' alongside official terminology.

Multilingual Support

1. Your webpage should strongly encourage the use of Hindi, English, and regional languages. ✗

Reason: The interface prominently shows Hindi and English branding/text, but there is no visible multilingual switcher enabling access to regional language versions. GIGW encourages broader multilingual availability beyond bilingual branding.

Solution: Add a visible language selector in the header supporting Hindi, English, and prioritized regional languages. Ensure key citizen services, navigation, help content, and important notices are translated consistently.

Form Design and Progressive Disclosure

1. Your webpage should use simple, step-by-step forms to avoid user fatigue and minimize the number of fields initially. N/A

Feedback Mechanisms (Chat, Contact)

1. Your webpage must provide an easy way for users to ask for help or provide feedback. ✓

Color Palette

1. Your webpage should use simple, neutral backgrounds that emphasize usability over bright colors. ✓

Header and Footer Structure

1. Your webpage footer should include fixed items: Home, About Us, Contact, Feedback, and Sitemap. ✗

Reason: The footer includes Help, Contact Us, Web Information Manager, Disclaimer, Website Policies, and Privacy Policy, along with multiple grouped link columns. However, the expected fixed footer items are not fully present together; Home, Feedback, and Sitemap are not clearly visible in the provided footer.

Solution: Standardize the footer to include explicit links for Home, About Us, Contact Us, Feedback, and Sitemap in a consistently visible footer utility row, in addition to existing policy and departmental links.

Typography

1. Your webpage should use clear, easy-to-read fonts and avoid decorative styles. ✓

Performance Optimization

1. Your webpage must load within 2–3 seconds, even on mobile networks. ✗

Reason: The page contains a large hero carousel, multiple image/link cards, icons, and a content-heavy homepage structure. From static screenshots alone, actual load speed cannot be verified, and the design suggests potential performance overhead, especially on mobile networks. Without measured evidence, this cannot be considered compliant.

Solution: Optimize hero images with next-gen formats and responsive sizing, lazy-load below-the-fold assets, minify scripts/styles, defer non-critical JavaScript, reduce carousel weight, enable caching/CDN delivery, and validate performance using Lighthouse and Core Web Vitals on mobile.

Language Support for Accessibility

1. Your webpage must include mandatory regional language support to accommodate India's diversity. ✗

Reason: No visible mechanism is provided for regional language accessibility beyond Hindi/English presentation. This limits inclusive access for users from diverse linguistic backgrounds.

Solution: Provide regionally relevant language options with accessible language-switch controls, translated key workflows, and proper lang attributes for screen readers.

Clear CTAs (Call-to-Actions)

1. Action buttons on your webpage must be prominently visible and clearly descriptive. ✓

Logo Usage

1. Your webpage should correctly use the Indian Government Emblem alongside project branding. ✓

Secure Connections (HTTPS Mandatory)

1. Your webpage must use HTTPS, as it is non-negotiable for all government websites. ✓

Performance

Values are estimated and may vary. The [performance score is calculated](#) directly from these metrics. [See calculator.](#)

UX4G Compliances

UX4G Compliances will help you calculate the compliance rating of your website based on UX4G Parameters.

All UX4G Compliances:

- Marked as Compliant:
- Marked as Non-Compliant:
- Marked as Not Applicable:

UI/UX Guidelines (GIGW)

GIGW Compliances evaluate your website's adherence to Indian Government UI/UX guidelines.

All GIGW Compliances: 20

● Marked as Compliant: 11

● Marked as Non-Compliant: 8

● Marked as Not Applicable: 1

Scalability and Future Proofing

1. Your webpage must be scalable for new features and services.

User Journey Mapping

1. Your webpage should emphasis on simple, progressive journeys for citizens (Application → Status → Outcome).

Reason: The evaluated page is content-heavy and informational ('About Us/History & Evolution') and does not present a clear citizen journey or task-based progression such as Apply, Track Status, and View Outcome. Primary user pathways are not prominently surfaced on this page.

Solution: Add clear task-oriented shortcuts in the header or page intro for key citizen journeys such as Examination/Application, Admit Card, Results, and Application Status. Use progressive navigation blocks and quick links to guide users step-by-step.

Navigation Simplicity

1. Your webpage should be minimal, clean, top-level navigation preferred (max 2-3 clicks to important sections).

Information Architecture (IA)

1. Your webpage should have a logical, hierarchical content structure that is easy to browse.

Search Functionality

1. Your webpage must include a visible and easy-to-use search functionality.

Mobile-First and Responsive Design

1. Your webpage should use responsive design to support mobile, tablet, and desktop devices.

Accessibility Focus

1. Your webpage should meet basic accessibility standards aligned with WCAG 2.0/2.1 guidelines.

Reason: From the screenshots, some text appears small and dense, especially in cards, directory sections, and long paragraphs. The page also relies on image-based content such as organizational charts and may not provide sufficient accessible alternatives or optimal readability for users with visual or cognitive impairments.

Solution: Increase body text readability, ensure sufficient color contrast, provide text alternatives for charts/images, add semantic heading structure, enable keyboard-friendly navigation, and validate the page against WCAG 2.1 AA criteria.

Consistent Iconography and Imagery

1. Your webpage icons and images must aid navigation and not confuse users. ✓

Content Simplicity

1. Your webpage should use simple, jargon-free, and citizen-friendly language. ✗

Reason: The page uses formal institutional language and long dense text blocks across sections like Historical Perspective, Citizen's Charter, and policy content. This reduces ease of understanding for average citizens.

Solution: Rewrite key sections in simpler plain language, use bullet summaries, add section highlights such as 'What this means for citizens,' and break long paragraphs into scannable content.

Multilingual Support

1. Your webpage should strongly encourage the use of Hindi, English, and regional languages. ✗

Reason: The screenshots do not show visible multilingual controls for Hindi or regional languages on this page. Content appears primarily in English.

Solution: Provide a prominent language switcher supporting at least Hindi and English, and where feasible regional languages. Ensure translated versions are available for key citizen-facing pages.

Form Design and Progressive Disclosure

1. Your webpage should use simple, step-by-step forms to avoid user fatigue and minimize the number of fields initially. N/A

Feedback Mechanisms (Chat, Contact)

1. Your webpage must provide an easy way for users to ask for help or provide feedback. ✓

Color Palette

1. Your webpage should use simple, neutral backgrounds that emphasize usability over bright colors. ✓

Header and Footer Structure

1. Your webpage footer should include fixed items: Home, About Us, Contact, Feedback, and Sitemap. ✗

Reason: While the footer appears content-rich and includes multiple useful links, the required fixed set of clearly identifiable items such as Home, About Us, Contact, Feedback, and Sitemap is not fully evident from the provided screenshots.

Solution: Standardize the footer with a dedicated quick-links band containing Home, About Us, Contact Us, Feedback, and Sitemap in clearly labeled form on all pages.

Typography

1. Your webpage should use clear, easy-to-read fonts and avoid decorative styles.

Performance Optimization

1. Your webpage must load within 2–3 seconds, even on mobile networks.

Reason: The page is long and media-heavy, containing multiple cards, profile images, directory tables, and section blocks. Based on visual composition alone, there is a risk of slower loading and heavier mobile rendering; no evidence of optimization is visible from the screenshots.

Solution: Optimize image sizes, lazy-load below-the-fold assets, compress CSS/JS, reduce unused scripts, and test page performance on mobile networks using Lighthouse/PageSpeed Insights.

Language Support for Accessibility

1. Your webpage must include mandatory regional language support to accommodate India's diversity.

Reason: No visible accessibility-oriented language support or regional language options are evident in the provided screenshots.

Solution: Implement accessible language selection with properly labeled controls, support Hindi and additional regional languages for critical information, and ensure screen readers can identify language changes correctly.

Clear CTAs (Call-to-Actions)

1. Action buttons on your webpage must be prominently visible and clearly descriptive.

Reason: This page focuses primarily on institutional information and does not prominently feature strong action-oriented CTAs for common citizen tasks. Existing links are more informational than transactional.

Solution: Add prominent CTAs such as Apply Online, View Exams, Download Notices, Contact UPSC, and Give Feedback in the hero/header and near relevant content sections.

Logo Usage

1. Your webpage should correctly use the Indian Government Emblem alongside project branding.

Secure Connections (HTTPS Mandatory)

1. Your webpage must use HTTPS, as it is non-negotiable for all government websites.

UX4G Compliances

UX4G Compliances will help you calculate the compliance rating of your website based on UX4G Parameters.

All UX4G Compliances: 57

● Marked as Compliant: 40

● Marked as Non-Compliant: 11

● Marked as Not Applicable: 6

Trust & Credibility

1. Is the website hosted on a secure server?

2. Has SSL encryption been implemented (indicated by https:// protocol in the URL)?

3. Is ownership information displayed on the webpage?

4. Has the webpage clearly provided contact details, including both an email address and a phone number?

5. Are data handling and privacy practices clearly communicated on the webpage through accessible and visible content? ❌

Reason: The threshold requires both Privacy Policy and Terms & Conditions to be clearly linked and accessible. Only Privacy Policy is clearly visible in the provided evidence.

Solution: Add a clearly labeled 'Terms & Conditions' link in the footer/header and ensure it opens a full document describing website usage terms.

6. Are both the Privacy Policy and Terms and Conditions accessible on the website through clearly visible links or sections? ❌

Reason: The criterion requires both links to be clearly visible. The screenshots only confirm Privacy Policy, not Terms & Conditions.

Solution: Provide a dedicated visible 'Terms & Conditions' footer link separate from disclaimer/policies and make it accessible on both desktop and mobile.

7. Is the National Emblem displayed prominently on the webpage? ✓

Mobile First Approach

1. Is the core content and primary functionality of the webpage easily accessible and usable on mobile devices without layout or usability issues? ✓

2. Are headings, bullet points, and short paragraphs on webpage are used for readability? ❌

Reason: The criterion expects headings, bullet points where appropriate, and short paragraphs. The content is readable but lacks bullet-based structuring.

Solution: Present address, phone numbers, email, office hours, and support options as a bullet list or structured contact blocks for easier scanning.

3. Does the webpage adhere to WCAG accessibility standards to ensure readability of text and visual content? ❌

Reason: The threshold requires basic WCAG 2.1 AA evidence including alt text, keyboard navigation, and screen reader support. These cannot be verified from the provided images.

Solution: Ensure all non-text elements have alt text, visible keyboard focus indicators exist, navigation is keyboard operable, and accessibility statements/documentation are published.

4. Are branding elements such as logos, colours, and fonts consistently applied across all device types and screen sizes of the webpage? ✓

About Us

1. Are contact details included on the webpage for inquiries related to the organisation? ✓

Exploration Without Login

1. Is significant portion of the webpage content accessible without login, allowing to explore and understand the product offerings freely? ✓

2. Is teaser content or a preview of premium features provided before sign up or log in for full access on the webpage? N/A

3. Is content organised into categories or equipped with filters to refine their exploration based on interests? ✓

4. Are personalized content recommendations offered based on behavior or trends, even without a login based on location? ✗

Reason: The criterion specifically requires recommendation modules without login. None are observable in the screenshots.

Solution: If relevant, add non-intrusive contextual suggestions such as nearest office/help resources or trending UPSC updates based on user location or common tasks.

5. Is content sharing enabled through external platforms or social media to allow wider distribution and engagement? ✗

Reason: The criterion requires content sharing controls; a social profile icon alone does not confirm page-sharing functionality.

Solution: Add page-sharing buttons for email/social platforms near the page title or footer with clear share actions.

Page Layout and Visual Design

1. Are clickable elements such as buttons clearly recognizable as interactive to enhance usability and reduce ambiguity? ✓

2. Do non-clickable items avoid visual attributes that may falsely suggest interactivity, preventing user confusion? ✓

3. Do buttons and controls have clear labels or design elements that indicate their intended function to support user interaction? ✓

4. Are hyperlinked texts readily identifiable, such as through underlining or color, to ensure they can be easily located? ✗

Reason: The criterion requires hyperlinks to be readily identifiable through clear visual distinction. Link styling is not strongly differentiated from surrounding text in the evidence provided.

Solution: Use consistent link color contrast, hover/focus states, and/or underlines for text links, especially in footer policy/navigation areas.

5. Are icons and graphics standard and intuitive-using commonly recognized symbols-to improve user comprehension? ✓

6. Does webpage titles easily accessible and recognizable to support consistent navigation? ✓

7. Is the same font style used throughout the webpage to maintain visual consistency? ✓

Search

1. Does placeholder text in the search bar guide on what can be searched for, such as 'Search products, categories, or brands'?

2. Is the placeholder text kept clear and concise, avoiding jargon?

3. Is it indicated if the search is global or local, with context-specific cues, like 'Search within this list'?

Reason: The criterion requires clear indication of search scope. No explicit scope cue is visible.

Solution: Label the field as 'Search the UPSC website' or 'Search all exams, notifications, results' to clarify global scope.

4. Does the search bar align with the overall theme and branding of the website?

Personalisation

1. Are location-based services offered to provide relevant information based on geographic location?

Reason: A static map does not satisfy the requirement for location-based services tailored to the user.

Solution: Add features such as route directions from current location, region-specific contact offices, or geographically relevant service information if applicable.

Task Orientation

1. Are scripts, applets, movies, audio files, graphics, and images not overused to prevent distraction?

2. Are important and frequently used features positioned near the center of the page for quick access?

3. Are buttons used for commands and actions instead of hyperlinked text to clarify functionality?

4. Are sorting and filtering options provided for webpage with a lot of information to enhance usability?

N/A

5. Is there a message before automatically logging off to avoid unintended interruptions?

N/A

Navigation and Information Architecture

1. Are primary navigation elements (e.g., tabs, menu items) easily accessible and clearly labeled on the webpage?

2. Are navigation elements placed in prominent locations, such as at the bottom or top of the webpage, where they can be easily reached?	✓
3. Are navigation elements large enough on the webpage to be clicked easily and are they accessible to those with disabilities?	✓
4. Are related content and features grouped logically on the webpage to help understand where to find specific information?	✓
5. Are clear and descriptive labels used for categories and sections to make navigation intuitive?	✓
6. Are primary actions and important content highlighted on each screen, reducing the need for excessive navigation?	✓
7. Is a consistent structure applied to similar sections and features, helping to develop a mental model of the webpage layout?	✓

Lists, Filters, and Sorting

1. Do all list items use consistent styling, including fonts, colors, and spacing, for a uniform look and feel?	✓
2. Are visual separators or dividers used between list items to enhance readability and distinguish between items on the webpage?	✗
Reason: The criterion expects explicit visual separation methods. Spacing alone is limited and no strong separator is visible. Solution: Add subtle dividers, increased spacing, or hover/focus separation to distinguish footer list items more clearly.	
3. Are list items easily clickable with sufficient spacing, preventing accidental taps and improving touch accuracy?	✓
4. Are filters positioned in a prominent and easily accessible location, such as at the top of the list or in a fixed menu?	N/A

Forms and Data Entry Checklist

1. Are forms concise, including only essential fields relevant to the task or data entry process?	N/A
2. Are labels positioned prominently above or beside input fields, clearly indicating the type of information required?	N/A

Writing and Content Quality Checklist

1. Is simple and direct language used to ensure that content is easy to understand, especially on smaller screens?	✓
2. Is content tailored to the webpage target audience, considering their language proficiency, cultural background, and preferences?	✓
3. Is a consistent brand voice maintained across all content, reflecting the webpage personality and values?	✓
4. Is the tone of voice adjusted based on the context and purpose of the content?	✓
5. Is content organized hierarchically with clear headings, subheadings, and bullet points to facilitate scanning and navigation?	✗
Reason: The threshold requires clear heading hierarchy and scannable formatting including bullet points where helpful. Hierarchy exists partially but scan-friendly structuring is limited. Solution: Break contact information into labeled subsections such as Address, Phone, Email, Office Support, and use bullets or cards for easier scanning.	
6. Is important information highlighted prominently, ensuring that critical details stand out?	✓
7. Is grammatical correctness ensured in all written content to enhance professionalism and credibility?	✓
8. Is content reviewed for spelling errors, typos, and punctuation mistakes before publication to maintain quality standards?	✓
9. Is the content on the webpage broken into smaller paragraphs with whitespace utilized for readability, avoiding dense blocks of text?	✓

Help, Feedback, and Error Tolerance Checklist

1. Does the webpage provide options to contact customer support directly via email, chat, or phone for more complex issues?	✓
---	---

NaN%**UX4G Compliances**

UX4G Compliances will help you calculate the compliance rating of your website based on UX4G Parameters.

All UX4G Compliances: 52● Marked as Compliant: **40**● Marked as Non-Compliant: **9**● Marked as Not Applicable: **3****Trust & Credibility****1. Has SSL encryption been implemented (indicated by https:// protocol in the URL)?****2. Is ownership information displayed on the webpage?****3. Has the webpage clearly provided contact details, including both an email address and a phone number?** **4. Are both the Privacy Policy and Terms and Conditions accessible on the website through clearly visible links or sections?**

Reason: Compliance requires both Privacy Policy and Terms & Conditions to be clearly accessible. Only Privacy Policy is clearly visible; Terms and Conditions is not explicitly shown.

Solution: Add a clearly labeled 'Terms and Conditions' link in the footer/header alongside Privacy Policy, and ensure it opens an accessible document with substantive content.

5. Is the National Emblem displayed prominently on the webpage?

Mobile First Approach

1. Is the core content and primary functionality of the webpage easily accessible and usable on mobile devices without layout or usability issues?

2. Does the webpage adhere to WCAG accessibility standards to ensure readability of text and visual content?

Reason: Basic WCAG 2.1 AA compliance cannot be confirmed from the observable evidence because required accessibility indicators such as alt text and keyboard/screen-reader support are not demonstrably present.

Solution: Provide verified alt text for all informative images/icons, visible keyboard focus states, semantic labels/ARIA for menus and buttons, sufficient contrast, and documented screen-reader compatibility.

3. Are branding elements such as logos, colours, and fonts consistently applied across all device types and screen sizes of the webpage?

Exploration Without Login

1. Is significant portion of the webpage content accessible without login, allowing to explore and understand the product offerings freely?

2. Is teaser content or a preview of premium features provided before sign up or log in for full access on the webpage?

N/A

3. Is content sharing enabled through external platforms or social media to allow wider distribution and engagement?

Reason: The required social/external sharing functionality is not clearly presented on the page.

Solution: Add page-level sharing controls near the title or document cards for common platforms and copy-link sharing.

Page Layout and Visual Design

1. Are clickable elements such as buttons clearly recognizable as interactive to enhance usability and reduce ambiguity?

2. Do non-clickable items avoid visual attributes that may falsely suggest interactivity, preventing user confusion?

3. Do buttons and controls have clear labels or design elements that indicate their intended function to support user interaction?

4. Are hyperlinked texts readily identifiable, such as through underlining or color, to ensure they can be easily located?

5. Are icons and graphics standard and intuitive-using commonly recognized symbols-to improve user comprehension?

6. Does webpage titles easily accessible and recognizable to support consistent navigation?

7. Is the same font style used throughout the webpage to maintain visual consistency?

Search

1. Is the search bar prominently placed, typically at the top of the screen, for easy access?

2. Does placeholder text in the search bar guide on what can be searched for, such as 'Search products, categories, or brands'?

3. Is the placeholder text kept clear and concise, avoiding jargon?

4. Is it indicated if the search is global or local, with context-specific cues, like 'Search within this list'?

Reason: The scope of search is not clearly indicated through label or contextual cue.

Solution: Add supporting text or label such as 'Search the UPSC website' or 'Search within examinations' to clarify search scope.

5. Does the search bar align with the overall theme and branding of the website?

Personalisation

1. Are location-based services offered to provide relevant information based on geographic location?

Reason: There is no observable location-based service or geographically adapted content.

Solution: If relevant, add optional location-aware support/contact routing or regional content selection; otherwise document that location-based services are intentionally not offered.

Task Orientation

1. Are scripts, applets, movies, audio files, graphics, and images not overused to prevent distraction?

2. Are important and frequently used features positioned near the center of the page for quick access?

3. Are buttons used for commands and actions instead of hyperlinked text to clarify functionality?	✓
4. Are crucial call-to-action buttons prominently displayed on webpage and screens to guide?	✓
5. Are sorting and filtering options provided for webpage with a lot of information to enhance usability?	✗
Reason: For an information list/archive context, no sorting/filtering mechanism is observable.	
Solution: Add filters by year/document type and sorting by latest update/date to improve discoverability.	
6. Is there a message before automatically logging off to avoid unintended interruptions?	N/A

Navigation and Information Architecture

1. Are primary navigation elements (e.g., tabs, menu items) easily accessible and clearly labeled on the webpage?	✓
2. Are navigation elements placed in prominent locations, such as at the bottom or top of the webpage, where they can be easily reached?	✓
3. Are navigation elements large enough on the webpage to be clicked easily and are they accessible to those with disabilities?	✗
Reason: Observable evidence suggests some targets may be undersized, and accessibility compliance for touch targets is not demonstrably met.	
Solution: Increase tap target sizes for utility controls and footer links to at least 44px and ensure sufficient spacing and focus states.	
4. Are related content and features grouped logically on the webpage to help understand where to find specific information?	✓
5. Are primary actions and important content highlighted on each screen, reducing the need for excessive navigation?	✓
6. Is a consistent structure applied to similar sections and features, helping to develop a mental model of the webpage layout?	✓

Lists, Filters, and Sorting

1. Do all list items use consistent styling, including fonts, colors, and spacing, for a uniform look and feel?	✓
2. Are visual separators or dividers used between list items to enhance readability and distinguish between items on the webpage?	✓

3. Are list items easily clickable with sufficient spacing, preventing accidental taps and improving touch accuracy?	✓
--	---

4. Are filters positioned in a prominent and easily accessible location, such as at the top of the list or in a fixed menu?	✗
---	---

Reason: The page lacks visible filtering options entirely.

Solution: Add accessible filters such as year, document status, and archive/recent toggle near the top of the list.

Forms and Data Entry Checklist

1. Are forms concise, including only essential fields relevant to the task or data entry process?	N/A
---	-----

2. Are labels positioned prominently above or beside input fields, clearly indicating the type of information required?	✗
---	---

Reason: A clear persistent label is not observable for the visible input field.

Solution: Add a visible label such as 'Search UPSC website' above or adjacent to the search input and retain placeholder as supplementary guidance.

Writing and Content Quality Checklist

1. Is simple and direct language used to ensure that content is easy to understand, especially on smaller screens?	✓
--	---

2. Is content tailored to the webpage target audience, considering their language proficiency, cultural background, and preferences?	✓
--	---

3. Is a consistent brand voice maintained across all content, reflecting the webpage personality and values?	✓
--	---

4. Is the tone of voice adjusted based on the context and purpose of the content?	✓
---	---

5. Is content organized hierarchically with clear headings, subheadings, and bullet points to facilitate scanning and navigation?	✓
---	---

6. Is important information highlighted prominently, ensuring that critical details stand out?	✓
--	---

7. Is grammatical correctness ensured in all written content to enhance professionalism and credibility?	✓
--	---

8. Is content reviewed for spelling errors, typos, and punctuation mistakes before publication to maintain quality standards?	✓
---	---

9. Is the content on the webpage broken into smaller paragraphs with whitespace utilized for readability, avoiding dense blocks of text?

Help, Feedback, and Error Tolerance Checklist

1. Does the webpage provide options to contact customer support directly via email, chat, or phone for more complex issues?

UI/UX Guidelines (GIGW)

GIGW Compliances evaluate your website's adherence to Indian Government UI/UX guidelines.

All GIGW Compliances: 20

● Marked as Compliant: 13

● Marked as Non-Compliant: 6

● Marked as Not Applicable: 1

Scalability and Future Proofing

1. Your webpage must be scalable for new features and services.

User Journey Mapping

1. Your webpage should emphasis on simple, progressive journeys for citizens (Application → Status → Outcome).

Reason: The page is primarily document-centric and does not present a clear task-based citizen journey such as application, status tracking, and outcome flow. While 'Apply Online' is visible globally, this page itself does not guide users through the examination lifecycle.

Solution: Add a prominent journey section with clear steps such as 'Apply for Exam', 'Check Application Status', 'Download Admit Card', 'View Result', and 'Next Steps'. Use contextual links on the examination calendar page to support user progression.

Navigation Simplicity

1. Your webpage should be minimal, clean, top-level navigation preferred (max 2-3 clicks to important sections).

Information Architecture (IA)

1. Your webpage should have a logical, hierarchical content structure that is easy to browse.

Search Functionality

1. Your webpage must include a visible and easy-to-use search functionality.

Mobile-First and Responsive Design

1. Your webpage should use responsive design to support mobile, tablet, and desktop devices.

Accessibility Focus

1. Your webpage should meet basic accessibility standards aligned with WCAG 2.0/2.1 guidelines.

Reason: Although the page includes accessibility aids such as skip link, font resize, and contrast controls, image-based review indicates possible low-contrast UI elements (light pink buttons, pale yellow labels, subtle separators) and no visible evidence of keyboard focus indicators, alt text quality, ARIA support, or semantic landmarks compliance.

Solution: Improve color contrast for buttons, tags, and secondary text to WCAG AA levels; ensure visible keyboard focus states; validate semantic heading order; provide descriptive alt text for logos/icons; add ARIA labels for controls; and perform full WCAG 2.1 AA audit with screen-reader and keyboard testing.

Consistent Iconography and Imagery

1. Your webpage icons and images must aid navigation and not confuse users. ✓

Content Simplicity

1. Your webpage should use simple, jargon-free, and citizen-friendly language. ✓

Multilingual Support

1. Your webpage should strongly encourage the use of Hindi, English, and regional languages. ✗

Reason: The page shows English content with bilingual branding in the header/logo area, but there is no clear multilingual content switcher or regional language availability for the page content and documents.

Solution: Provide a visible language selector supporting at least Hindi and English across page content, navigation, and key downloadable resources; expand to regional languages where relevant.

Form Design and Progressive Disclosure

1. Your webpage should use simple, step-by-step forms to avoid user fatigue and minimize the number of fields initially. N/A

Feedback Mechanisms (Chat, Contact)

1. Your webpage must provide an easy way for users to ask for help or provide feedback. ✓

Color Palette

1. Your webpage should use simple, neutral backgrounds that emphasize usability over bright colors. ✓

Header and Footer Structure

1. Your webpage footer should include fixed items: Home, About Us, Contact, Feedback, and Sitemap. ✗

Reason: The footer includes Contact, Help, Web Information Manager, Disclaimer, Website Policies, and Privacy Policy, but 'Home', explicit 'About Us', 'Feedback' as a dedicated footer utility item, and 'Sitemap' are not all clearly present in the required fixed footer set.

Solution: Add a standardized footer utility bar containing Home, About Us, Contact, Feedback, and Sitemap links consistently across the site.

Typography

1. Your webpage should use clear, easy-to-read fonts and avoid decorative styles. ✓

Performance Optimization

1. Your webpage must load within 2–3 seconds, even on mobile networks.

Reason: Performance cannot be confirmed from screenshots alone, and the page contains multiple logos, navigation assets, icons, and document cards that may affect mobile loading. No observable performance metrics are provided.

Solution: Run Lighthouse/PageSpeed testing; optimize images and SVGs; lazy-load non-critical assets; minify CSS/JS; enable caching and compression; and monitor Core Web Vitals for mobile users.

Language Support for Accessibility

1. Your webpage must include mandatory regional language support to accommodate India's diversity.

Reason: No visible regional language selection or translated page content is provided beyond bilingual emblem/branding text, which is insufficient for broad accessibility support.

Solution: Implement accessible language switching with translated page templates, key navigation labels, support text, and essential PDF/document alternatives in Hindi and relevant regional languages.

Clear CTAs (Call-to-Actions)

1. Action buttons on your webpage must be prominently visible and clearly descriptive.

Logo Usage

1. Your webpage should correctly use the Indian Government Emblem alongside project branding.

Secure Connections (HTTPS Mandatory)

1. Your webpage must use HTTPS, as it is non-negotiable for all government websites.

PASSED AUDITS (11)

Show

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

ARIA

! [aria-*] attributes match their roles — Error!	▼
! [aria-hidden="true"] is not present on the document <body> — Error!	▼
! [role]s have all required [aria-*] attributes — Error!	▼
! Elements with an ARIA [role] that require children to contain a specific [role] have all required children. — Error!	▼
! [role]s are contained by their required parent element — Error!	▼
! [aria-*] attributes have valid values — Error!	▼
! [aria-*] attributes are valid and not misspelled — Error!	▼
! ARIA IDs are unique — Error!	▼
! button, link, and menuitem elements have accessible names — Error!	▼
! ARIA attributes are used as specified for the element's role — Error!	▼
! Elements with role="dialog" or role="alertdialog" have accessible names. — Error!	▼
! [aria-hidden="true"] elements do not contain focusable descendents — Error!	▼
! ARIA input fields have accessible names — Error!	▼
! ARIA meter elements have accessible names — Error!	▼

! ARIA <code>progressbar</code> elements have accessible names — Error!	▼
! Elements use only permitted ARIA attributes — Error!	▼
! <code>[role]</code> values are valid — Error!	▼
! Elements with the <code>role=text</code> attribute do not have focusable descendents. — Error!	▼
! ARIA toggle fields have accessible names — Error!	▼
! ARIA <code>tooltip</code> elements have accessible names — Error!	▼
! ARIA <code>treeitem</code> elements have accessible names — Error!	▼
! Uses ARIA roles only on compatible elements — Error!	▼
! Deprecated ARIA roles were not used — Error!	▼

These are opportunities to improve the usage of ARIA in your application which may enhance the experience for users of assistive technology, like a screen reader.

NAMES AND LABELS

! Buttons have an accessible name — Error!	▼
! Image elements have <code>[alt]</code> attributes — Error!	▼
! Input buttons have discernible text. — Error!	▼
! <code><input type="image"></code> elements have <code>[alt]</code> text — Error!	▼
! Document has a <code><title></code> element — Error!	▼
! <code><frame></code> or <code><iframe></code> elements have a title — Error!	▼
! Form elements have associated labels — Error!	▼
! Links have a discernible name — Error!	▼
! <code><object></code> elements have alternate text — Error!	▼
! Select elements have associated label elements. — Error!	▼
! No form fields have multiple labels — Error!	▼
! Skip links are focusable. — Error!	▼
! Image elements do not have <code>[alt]</code> attributes that are redundant text. — Error!	▼

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

BEST PRACTICES

- ! The document does not use `<meta http-equiv="refresh">` — Error! 
- ! `[user-scalable="no"]` is not used in the `<meta name="viewport">` element and the `[maximum-scale]` attribute is not less than 5. — Error! 
- ! Touch targets have sufficient size and spacing. — Error! 

These items highlight common accessibility best practices.

AUDIO AND VIDEO

- ! `<video>` elements contain a `<track>` element with `[kind="captions"]` — Error! 

These are opportunities to provide alternative content for audio and video. This may improve the experience for users with hearing or vision impairments.

NAVIGATION

- ! `[accesskey]` values are unique — Error! 
- ! The page contains a heading, skip link, or landmark region — Error! 
- ! No element has a `[tabindex]` value greater than 0 — Error! 
- ! Heading elements appear in a sequentially-descending order — Error! 

These are opportunities to improve keyboard navigation in your application.

CONTRAST

- ! Background and foreground colors have a sufficient contrast ratio — Error! 
- ! Links are distinguishable without relying on color. — Error! 

These are opportunities to improve the legibility of your content.

TABLES AND LISTS

- ! `<dl>`'s contain only properly-ordered `<dt>` and `<dd>` groups, `<script>`, `<template>` or `<div>` elements. — Error! ✓
- ! Definition list items are wrapped in `<dl>` elements — Error! ✓
- ! Lists contain only `<li>` elements and script supporting elements (`<script>` and `<template>`). — Error! ✓
- ! List items (`<li>`) are contained within `<ul>`, `<ol>` or `<menu>` parent elements — Error! ✓
- ! Cells in a `<table>` element that use the `[headers]` attribute refer to table cells within the same table. — Error! ✓
- ! `<th>` elements and elements with `[role="columnheader"/"rowheader"]` have data cells they describe. — Error! ✓
- ! Tables have different content in the summary attribute and `<caption>`. — Error! ✓

These are opportunities to improve the experience of reading tabular or list data using assistive technology, like a screen reader.

INTERNATIONALIZATION AND LOCALIZATION

- ! `<html>` element has a `[lang]` attribute — Error! ✓
- ! `<html>` element has a valid value for its `[lang]` attribute — Error! ✓
- ! `[lang]` attributes have a valid value — Error! ✓
- ! `<html>` element has an `[xml:lang]` attribute with the same base language as the `[lang]` attribute. — Error! ✓

These are opportunities to improve the interpretation of your content by users in different locales.

ADDITIONAL ITEMS TO MANUALLY CHECK (10)

Show

These items address areas which an automated testing tool cannot cover. Learn more in our guide on [conducting an accessibility review](#).

Best Practices

USER EXPERIENCE

- ! Allows users to paste into input fields — Error! ▼
- ! Displays images with correct aspect ratio — Error! ▼
- ! Serves images with appropriate resolution — Error! ▼
- ! Has a `<meta name="viewport">` tag with `width` or `initial-scale` — Error! ▼
- ! Document uses legible font sizes — Error! ▼

BROWSER COMPATIBILITY

- ! Page has the HTML doctype — Error! ▼
- ! Properly defines charset — Error! ▼

TRUST AND SAFETY

- ! Ensure CSP is effective against XSS attacks — Error! ▼

UX4G Compliances

UX4G Compliances will help you calculate the compliance rating of your website based on UX4G Parameters.

All UX4G Compliances: 52

● Marked as Compliant: 38

● Marked as Non-Compliant: 14

● Marked as Not Applicable: 0

Trust & Credibility

1. Has SSL encryption been implemented (indicated by https:// protocol in the URL)?

2. Is ownership information displayed on the webpage?

3. Has the webpage clearly provided contact details, including both an email address and a phone number?

4. Are both the Privacy Policy and Terms and Conditions accessible on the website through clearly visible links or sections?

Reason: Compliance requires both Privacy Policy and Terms & Conditions to be clearly linked and accessible. Only Privacy Policy is visibly present; Terms & Conditions is not explicitly shown.

Solution: Add a clearly labeled 'Terms & Conditions' link in the footer/header near 'Privacy Policy' and ensure it opens a dedicated page with full terms content.

5. Is the National Emblem displayed prominently on the webpage?

Reason: For government websites, the National Emblem should be prominently visible in the header/top section. The observed emblematic element is the UPSC logo/crest rather than a clearly identifiable standalone National Emblem.

Solution: Place the official Indian National Emblem prominently in the top header area with clear visibility and proper sizing, distinct from the UPSC organizational logo.

Mobile First Approach

1. Is the core content and primary functionality of the webpage easily accessible and usable on mobile devices without layout or usability issues?

2. Does the webpage adhere to WCAG accessibility standards to ensure readability of text and visual content?

Reason: Basic WCAG 2.1 AA compliance requires evidence of alt text, keyboard navigation, and screen reader compatibility. These are not observable in the supplied images.

Solution: Ensure images/icons have alt text, all menus and controls are keyboard operable with visible focus states, and ARIA labels/semantic markup support screen readers. Validate with an accessibility audit.

3. Are branding elements such as logos, colours, and fonts consistently applied across all device types and screen sizes of the webpage?

Exploration Without Login

1. Is significant portion of the webpage content accessible without login, allowing to explore and understand the product offerings freely?

2. Is teaser content or a preview of premium features provided before sign up or log in for full access on the webpage?

Reason: The page does not show premium/gated features or preview content before sign-up/login.

Solution: If the platform includes restricted modules, add preview cards or informational teasers that explain benefits and available services before requiring authentication.

3. Is content sharing enabled through external platforms or social media to allow wider distribution and engagement?

Reason: Compliance requires visible sharing options. The provided page does not show share buttons for distributing content externally.

Solution: Add page-level sharing controls (e.g., share on X, Facebook, LinkedIn, copy link, email) near the main content or footer.

Page Layout and Visual Design

1. Are clickable elements such as buttons clearly recognizable as interactive to enhance usability and reduce ambiguity?	✓
2. Do non-clickable items avoid visual attributes that may falsely suggest interactivity, preventing user confusion?	✓
3. Do buttons and controls have clear labels or design elements that indicate their intended function to support user interaction?	✓
4. Are hyperlinked texts readily identifiable, such as through underlining or color, to ensure they can be easily located?	✗
Reason: Hyperlinks should be readily identifiable through consistent visual cues such as underlines or stronger color differentiation. That is not clearly observable here. Solution: Apply consistent link styling such as underlines, contrasting colors, or hover/focus states to all text links, especially in footer and navigation areas.	
5. Are icons and graphics standard and intuitive-using commonly recognized symbols-to improve user comprehension?	✓
6. Does webpage titles easily accessible and recognizable to support consistent navigation?	✓
7. Is the same font style used throughout the webpage to maintain visual consistency?	✓

Search

1. Is the search bar prominently placed, typically at the top of the screen, for easy access?	✓
2. Does placeholder text in the search bar guide on what can be searched for, such as 'Search products, categories, or brands'?	✓
3. Is the placeholder text kept clear and concise, avoiding jargon?	✓
4. Is it indicated if the search is global or local, with context-specific cues, like 'Search within this list'?	✗
Reason: There is no explicit scope cue such as 'Search this website' or 'Search within Central Government'. Solution: Add scope labeling such as 'Search UPSC website' or 'Search within Central Government section' near or inside the search field.	
5. Does the search bar align with the overall theme and branding of the website?	✓

Personalisation

1. Are location-based services offered to provide relevant information based on geographic location?

Reason: The page does not show any location-aware personalization features.

Solution: Introduce optional location-based services where relevant, such as region-specific office details, local notices, or service routing based on the user's state/city.

Task Orientation

1. Are scripts, applets, movies, audio files, graphics, and images not overused to prevent distraction?

2. Are important and frequently used features positioned near the center of the page for quick access?

3. Are buttons used for commands and actions instead of hyperlinked text to clarify functionality?

4. Are crucial call-to-action buttons prominently displayed on webpage and screens to guide?

5. Are sorting and filtering options provided for webpage with a lot of information to enhance usability?

Reason: No sort/filter functionality is present. Although the page is not information-heavy, the criterion asks for such options where applicable; none are visible.

Solution: If the section expands into longer service lists, add filters/search refinement such as category, ministry, or service type.

6. Is there a message before automatically logging off to avoid unintended interruptions?

Reason: The required timeout warning behavior is not observable on the provided page.

Solution: Implement a session timeout warning modal with a countdown and an option to continue the session before logout.

Navigation and Information Architecture

1. Are primary navigation elements (e.g., tabs, menu items) easily accessible and clearly labeled on the webpage?

2. Are navigation elements placed in prominent locations, such as at the bottom or top of the webpage, where they can be easily reached?

3. Are navigation elements large enough on the webpage to be clicked easily and are they accessible to those with disabilities?

Reason: Minimum touch-target size and disability accessibility cannot be fully confirmed from the screenshots; some header utility icons appear small.

Solution: Ensure all navigation links/icons meet minimum 44×44px touch targets, provide sufficient spacing, and verify accessibility through responsive and assistive-tech testing.

4. Are related content and features grouped logically on the webpage to help understand where to find specific information?

5. Are primary actions and important content highlighted on each screen, reducing the need for excessive navigation?

6. Is a consistent structure applied to similar sections and features, helping to develop a mental model of the webpage layout?

Lists, Filters, and Sorting

1. Do all list items use consistent styling, including fonts, colors, and spacing, for a uniform look and feel?

2. Are visual separators or dividers used between list items to enhance readability and distinguish between items on the webpage?

3. Are list items easily clickable with sufficient spacing, preventing accidental taps and improving touch accuracy?

4. Are filters positioned in a prominent and easily accessible location, such as at the top of the list or in a fixed menu?

Reason: The page does not provide filter controls.

Solution: If the listing grows, add filters at the top of the service area, such as service category or department type.

Forms and Data Entry Checklist

1. Are forms concise, including only essential fields relevant to the task or data entry process?

Reason: A form with multiple fields is not present in the observable page content, so compliance with concise field design cannot be established.

Solution: Where forms exist, display only essential fields, clearly mark optional fields, and minimize unnecessary inputs.

2. Are labels positioned prominently above or beside input fields, clearly indicating the type of information required?

Reason: The criterion requires clear labels for input fields. A placeholder alone is not a strong substitute for a persistent label, and no other form labels are visible.

Solution: Provide persistent labels above or beside all inputs, including the search field where appropriate, and ensure labels remain visible during data entry.

Writing and Content Quality Checklist

1. Is simple and direct language used to ensure that content is easy to understand, especially on smaller screens?	✓
2. Is content tailored to the webpage target audience, considering their language proficiency, cultural background, and preferences?	✓
3. Is a consistent brand voice maintained across all content, reflecting the webpage personality and values?	✓
4. Is the tone of voice adjusted based on the context and purpose of the content?	✓
5. Is content organized hierarchically with clear headings, subheadings, and bullet points to facilitate scanning and navigation?	✓
6. Is important information highlighted prominently, ensuring that critical details stand out?	✓
7. Is grammatical correctness ensured in all written content to enhance professionalism and credibility?	✓
8. Is content reviewed for spelling errors, typos, and punctuation mistakes before publication to maintain quality standards?	✓
9. Is the content on the webpage broken into smaller paragraphs with whitespace utilized for readability, avoiding dense blocks of text?	✓

Help, Feedback, and Error Tolerance Checklist

1. Does the webpage provide options to contact customer support directly via email, chat, or phone for more complex issues?	✓

UI/UX Guidelines (GIGW)

GIGW Compliances evaluate your website's adherence to Indian Government UI/UX guidelines.

All GIGW Compliances:

- Marked as Compliant:
- Marked as Non-Compliant:
- Marked as Not Applicable:

Audit 360

by UX4G

DISCLAIMER

The compliance report is advisory in nature and, it is developed to help the product team in getting faster UX Audit results and related solutions for better user engagement and satisfaction of a digital platform.

This report has been generated in whole or in part using artificial intelligence (AI) technologies. Results are based on the AI prompts. All users of this report are responsible for independently verifying the information and assessing its suitability for their purposes. Critical data points, statistics, and recommendations should be cross-referenced with manual checks.

The members may also like to conduct the comprehensive UX Audit using [Self UX Health Check Tool](#) applying manual clicks for more accuracy.
