

Test Fixture — Not a Genuine Document

This PDF is generated by the SAMAVESH design-audit capture engine to exercise the document-upload step of the e-Anudaan grant application on the UAT environment. It carries no departmental content and must not be treated as a record of any organisation, project or sanction.

Test Fixture

Section 1 — Purpose

The upload step of each scheme verifies every attached file before enabling the forward control. A minimal, structurally incomplete PDF fails that verification, which is why the capture walk previously stopped at Document Uploads in all three schemes. This document is a well-formed multi-page PDF produced by a real renderer, so the verification gate opens as it would for a genuine attachment.

Test Fixture

Section 2 — Scope

Attached in place of every requested supporting document during an automated walk of the NAPDDR, AVYAY and SHRESHTA Mode 2 wizards. The walk captures each step as it is found and again once filled. No officer decision is exercised by the walk that uses this fixture.

Section 3 — Provenance

Generated on the capture host from tools/design-audit, using the same browser the engine drives. Regenerating it produces an equivalent file. It is committed so a re-run does not depend on a machine-local artefact.

Section 4 — Retention

Records created on the UAT environment by a capture run are test records. They are additive: the walk creates new applications and does not modify cases that other demonstration accounts are staged against.
